This three volume Encyclopedia presents the important developments, movements, photographers, photographic institutions, and theoretical aspects of the field along with information about equipment, techniques, and practical applications of photography. Camera Works is about the impact of photography and film on modern art and literature. For many artists and writers, these new media offered hope of new means of representation, neither linguistic nor pictorial, but hovering in a kind of utopian space between. At the same time, the new media introduced a dramatic element of novelty into the age-old evidence of the senses. For the avant-garde, the challenges of the new media were the modern in its most concentrated form, but even for aesthetically unadventurous writers they constituted an element of modern experience that could hardly be ignored. Camera Works thus traces some of the more utopian projects of the transatlantic avant-garde, including the Reade machine of Bob Brown, which was to turn stories and poems into strips of linguistic film. The influence of photography and film on the avant-garde is traced from the early days of Camera Work, through the enthusiasm of Eugene Iolas and the contributors to his magazine transition, to the crisis created by the introduction of sound in the late 1920s. Subsequent chapters describe the entirely new kind of sensory enjoyment brought into modern American fiction by the new media. What Fitzgerald calls "spectroscopic gayety," the enjoyable disorientation of the senses by machine perception, turns out to be a powerful force in much American fiction. The revolutionary possibilities of this new spectatorship and its limitations are pursued through a number of examples, including Dos Passos, James Weldon Johnson, and Hemingway. Together, these chapters offer a new and substantially different account of the relationship between modern American literature and the mediatized society of the early twentieth century. With a comprehensive introduction and detailed particular readings, Camera Works substantiates a new understanding of the formal and historical bases of modernism. It argues that when modern literature and art respond to modernity, on a formal level, they are responding to the intervention of technology in the transmission of meaning, an intervention that unsettles all the terms in the essential relationship of human consciousness to the world of phenomena.

The Encyclopedia of Twentieth-Century Photography explores the vast international scope of twentieth-century photography and explains that history with a wide-ranging, interdisciplinary manner. This unique approach covers the aesthetic history of photography as an evolving art and documentary form, while also recognizing it as a developing technology and cultural force. This Encyclopedia presents the important developments, movements, photographers, photographic institutions, and theoretical aspects of the field along with information about equipment, techniques, and practical applications of photography. To bring this history alive for the reader, the set is illustrated in black and white throughout, and each volume contains a color plate section. A useful glossary of terms is also included.

A sweeping retrospective of American photography in the twentieth century features 125 works covering the field from the introduction of the 35-millimeter camera to the digital technology currently dominating the market. (Fine Arts)

With the advent of digital imaging, the era of traditional color photography is coming to an end. Yet more than 150 years after the invention of color photography, museums, archives, and personal collections are full of images to be cherished, studied, and preserved. These photographs, often made with processes and materials no longer used or easily identified, constitute an important part of the cultural and artistic heritage of the twentieth century. Today it is more important than ever to capture the technical understanding of the processes that created these irreplaceable images. In providing an accessible overview of the history and technology of the major traditional color photographic processes, this abundantly illustrated volume promises to become the standard reference in its field. Following an introductory chapter on color photography in the nineteenth century, seven uniformly structured chapters discuss the most commercially or historically significant processes of the twentieth century—additive color screen, pigment, dye imbibition, dye coupling, dye destruction, dye diffusion, and dye mordanting and silver toning—offering readers a user-friendly guide to materials, methods of identification, and common kinds of deterioration. A final chapter presents specific guidelines for collection management, storage, and preservation. There is also a glossary of technical terms, along with appendices presenting detailed chronologies for Kodachrome and Ektachrome transparencies, Cibachrome/Ilfochrome printing materials, and Instant films. This book will interest instructors and students in classroom settings; conservators, registrars, curators, archivists, and collection caretakers; and anyone else concerned with the long-term preservation of color photographs.

Presents signature images of the twentieth-century by twenty photographers, with portraits of each photographer by the author

It will be the first of two books (the second forthcoming in 2014) that seek to illustrate the outstanding quality and variety of the works which have marked American photography from the mid-20th century to the present day. This first volume presents a detailed and annotated selection of works executed between the 1940s and 1970s by 18 photographers of undisputed importance whose pursuits represent benchmarks in the history of contemporary photography. As in the case of other titles in the series, the reproductions of all the works are accompanied by a critical apparatus with texts discussing the area, artists and re- search explored. The volume includes works by: Ansel Adams, Robert Adams, Wynn Bullock, Harry Callahan, Paul Caponigro, Bruce Davidson, Roy DeCarava, Van Deren Coke, Robert Frank, Lee Friedlander, John Gossage, Ralph Eugene Meatyard, Richard Misrach, Stephen Shore, Aaron Siskind, Edward Weston, Minor White, and Garry Winogrand. 0Exhibition: Ex Ospedale Sant'Agostino, Modena, Italy (12.2012-1.3.2013).

Photography and Literature in the Twentieth-Century offers an accessible and fresh approach to an object of interdisciplinary research that is currently receiving increased international attention. Providing a broad historical schema, and examining pivotal moments within it, the collection brings together a range of writers and practitioners who help to guide the reader through a historical cross-section of current work in this area. Unlike most existing studies, this volume considers both key literary figures, from Proust to Sebald, and photographic practitioners, from Heartfield to Sekula, in order to give a commanding overview of its subject that is both well-informed and often ground-breaking. With original and accessible essays by acknowledged experts in the field, this is a book that should be of interest not only to students and teachers in departments of literature and photography, but also to those in cultural studies and art history, as well as photographic artists.
