This text is written to help managers begin to form and point of view of how information systems will help, hinder and create opportunities for their organizations. It is intended to provide a solid foundation of basic concepts relevant to using and managing information.

Climate change is a major problem, generating both risks and opportunities that will have a direct impact on the economy and the financial sector. In recent years, climate change has threatened both the survival of the financial system and economic development. The growing occurrence of extreme climate events combined with the imprudent nature of economic growth can cause unsustainable levels of harm to the financial sectors. On the other hand, it presents a range of new business challenges. In contrast to the most evident physical risks, companies are vulnerable to transformational risks that arise from the reaction of society to climate change, such as technological change, regulation and markets that can boost the cost of doing business, threats to the profitability of existing goods, or effects on the value of the asset. Climate change also offers new business opportunities, and it has made research in the context of a sustainable financial sector indispensable. **The Handbook of Research on Climate Change and the Sustainable Financial Sector** focuses on the impacts of climate change on various sectors of the world economy. This book covers how businesses can improve their sustainability, the impact of climate change on the financial sector, and specifically, the impacts on financial services, supply chains, and the socio-economic status of the world. Beyond focusing on the impacts to the financial industry itself, this book assesses how climate change in the financial sector affects the well-being of society in areas such as unemployment, economic recessions, decreases in consumer purchases, and more. This book is essential for stockbrokers, business managers, directors, fund managers, financial analysts, consultants and actuaries, institutional investors, policymakers, practitioners, researchers, academicians, and students interested in a comprehensive view of the impact of climate change on the financial sector.

You think you have a winning strategy. But do you? Executives are bombarded with

bestselling ideas and best practices for achieving competitive advantage, but many of these ideas and practices contradict each other. Should you aim to be big or fast? Should you create a blue ocean, be adaptive, play to win—or forget about a sustainable competitive advantage altogether? In a business environment that is changing faster and becoming more uncertain and complex almost by the day, it's never been more important—or more difficult—to choose the right approach to strategy. In this book, The Boston Consulting Group's Martin Reeves, Knut Haanæs, and Janmejaya Sinha offer a proven method to determine the strategy approach that is best for your company. They start by helping you assess your business environment—how unpredictable it is, how much power you have to change it, and how harsh it is—a critical component of getting strategy right. They show how existing strategy approaches sort into five categories—Be Big, Be Fast, Be First, Be the Orchestrator, or simply Be Viable—depending on the extent of predictability, malleability, and harshness. In-depth explanations of each of these approaches will provide critical insight to help you match your approach to strategy to your environment, determine when and how to execute each one, and avoid a potentially fatal mismatch. Addressing your most pressing strategic challenges, you'll be able to answer questions such as:

- What replaces planning when the annual cycle is obsolete?
- When can we—and when should we—shape the game to our advantage?
- How do we simultaneously implement different strategic approaches for different business units?
- How do we manage the inherent contradictions in formulating and executing different strategies across multiple businesses and geographies?

Until now, no book brings it all together and offers a practical tool for understanding which strategic approach to apply. Get started today.

This book provides a much-needed analysis of this very important subject for international business lawyers, including discussion of the jurisdictional and choice of laws issues arising from cross-border contracts of insurance and reinsurance concluded by electronic means. This book is the first published in England to devote itself to a detailed analysis of the choice of laws rules in the E.C. Insurance Directives. It is aimed at academics and practitioners, at private international lawyers and at insurance lawyers. The private international law rules of the E.C. Insurance Directives deal with the applicable law to insurance contracts covering risks situated within the EU. They do not deal with the applicable law to reinsurance contracts and insurance contracts covering risks situated outside the EU. This should be ascertained by reference to the choice of laws provisions in the 1980 Rome Convention on the law applicable to contractual obligations. Detailed discussion of these rules is also provided, and proposals for reform suggested.

This book is more than just a 'palliative care' guide for the planet - it is about innovation, solutions, competitiveness and profitability. At work, at home and as members of society, our generation has an opportunity - to be part of the obligation - and an exciting solution in restoring the balance. The authors present a bold vision for the future and demonstrate how we can get there, drawing on lessons of competitive advantage theory and the latest in sustainability, economics, innovation, business and governance theory and practice. The result is nothing less than the most authoritative and comprehensive guide to date, to building the new ecologically sustainable economy.
