A practical guide to the majority of pumps and compressors used in engineering applications Pumps and compressors are ubiquitous in industry, used in manufacturing, processing and chemical plant, HVAC installations, aerospace propulsion systems, medical applications, and everywhere else where there is a need to pump liquids, or circulate or compress gasses. This well-illustrated handbook covers the basic function, performance, and applications for the most widely used pump and compressor types available on the market today. It explains how each device operates and includes the governing mathematics needed to calculate device performance such as flow rates and compression. Additionally, real-world issues such as cavitation, and priming are covered. Pumps & Compressors is divided into two sections, each of which offers a notation of variables and an introduction. The Pumps section covers piston pumps, radial turbopumps, axial turbopumps, rotating pumps, hydraulic pumps, and pumps with driving flow. The Compressors section covers piston compressors, rotating compressors, turbo compressors, ejectors, vacuum pumps, and compressors for cooling purposes. A virtual encyclopedia of all pumps and compressors that describes the mechanics of all devices and the theory, mathematics, and formulas governing their function Allows the reader to develop the skills needed to confidently select the appropriate pump or compressor type and specification for their applications Pumps & Compressors is an excellent text for courses on pumps and compressors, as well as a valuable reference for professional engineers and laymen seeking knowledge on the topic.

Autobiography has seen enormous expansions and challenges over the past decades. One of these expansions has been in comics, and it is an expansion that pushes back against any postmodern notion of the death of the author/subject, while also demanding new approaches from critics. Drawing from Life: Memory and Subjectivity in Comic Art is a collection of essays about autobiography, semiautobiography, fictionalized autobiography, memory, and self-narration in sequential art, or comics. Contributors come from a range of academic backgrounds including English, American studies, comparative literature, gender studies, art history, and cultural studies. The book engages with well-known figures such as Art Spiegelman, Marjane Satrapi, and Alison Bechdel; with cult-status figures such as Martin Vaughn-James; and with lesser-known works by artists such as Frédéric Boilet. Negotiations between artist/writer/body and drawn/writer/text raise questions of how comics construct identity, and are read and perceived, requiring a critical turn towards theorizing the comics' viewer. At stake in comic memoir and semi-autobiography is embodiment. Remembering a scene with the intent of rendering it in sequential art requires nonlinear thinking and engagement with physicality. Who was in the room and where? What was worn? Who spoke first? What images dominated the encounter? Did anybody smile? Man or mouse? Unhinged from the summary paragraph, the comics artist must confront the fact of the flesh, or the corporeal world, and they do so with fascinating results.
