In answers A and B, we see that x is being subtracted by a number, so we know that the y value that we get will not be 0. This leaves us with the equations $y=x$ and $y=2x$. If $y=x$ is true, x and y should always have the same value.

Word Problems. Does even thinking about solving word problems in math make you feel tense, anxious, confused, or frustrated? You're not alone. Most high school students - even ones who excel in their math classes - find word problems on the PSAT/NMSQT, SAT, and ACT tough to solve consistently and efficiently. Adult students preparing for the

GMAT or GRE find word problems just as daunting as these were in high school. Most major publishers only briefly explain word problems and demonstrate simple examples in their study guides, but challenge students with very difficult practice problems. Even students in their test prep courses remain confused and lacking in confidence about how to approach word problems. All Your Word Problems Solved serves as an invaluable supplement to whichever test-specific study guide you prefer. This book will help you learn to systematically decode math word problems, set up the correct equations, organize your scratch work to "error-proof" yourself, and efficiently arrive at the right answer, every time. The strategies, approaches, techniques, and tips found in this book have been created and tested with students aged 15 to 40+ preparing for the most common standardized college and graduate admissions tests, including the GMAT, GRE, SAT, PSAT/NMSQT and ACT. In this book, you will learn a set of structured-but-flexible approaches which can be combined in different ways to solve even the hardest questions on your standardized tests. What makes this book so valuable? In the words of a GMAT student: "Clear explanation of how to organize your work and make sense of what you are actually solving for." Presentation of information is designed to accelerate your learning and improve your retention of facts, relationships, and formulas. Sample problems
