Catholic social teaching has explosive power for changing not just

individuals, but whole societies. And it's the saints who light the fuse. -
Brandon Vogt The value of human life. The call to family and community. Serving the poor. The rights of workers. Care for creation. The church has always taught certain undeniable truths that can and should affect our society. But over the years, these teachings have been distorted, misunderstood, and forgotten. With the help of fourteen saints, it's time we reclaim Catholic social teaching and rediscover it through the lives of those who best lived it out. Follow in the saints' footsteps, learn from their example, and become the spark of authentic social justice that sets the world on fire. Learn from heroes like: Bl. Teresa of Calcutta St. Peter Claver St. Frances of Rome St. Roque Gonzalez Bl. Pier Giorgio Frassati St.

An authorised reissue of the long out of print classic textbook, Advanced Calculus by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in

any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention Differential and Integral Calculus by R Courant, Calculus by T Apostol, Calculus by M Spivak, and Pure Mathematics by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the

calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.

"This text provides a strong foundation to precalculus that focuses on a small number of key topics thereby emphasising depth of understanding rather than breath of coverage. It provides a solid way to motivate concepts and develop critical thinking skills. The new fourth edition emphasises functions as models of change. It contains superior exercises and applications that motivate the concepts students can use to fully grasp precalculus"--
