Caproni Ca 3
The Caproni Ca.3 was an Italian heavy bomber of World War I and the postwar era. It was the definitive version of the series of aircraft that began with the Caproni Ca.1 in 1914.

Caproni Ca.3 (1916) - Wikipedia
The Ca.3 was a development of Ca.2, by replacing the two engines mounted on the booms with the same Isotta-Fraschini engine that had been used as the central, pusher engine on that design. The prototype flew in late 1916 and was soon put into production. Known to Caproni at the time as the Caproni 450 hp, the Italian Army designated it the Ca.3.

Caproni Ca.3 Heavy Biplane Bomber Aircraft
Caproni Ca-3 Italy was one of the first countries in the world to develop and use heavy bombers. The Caproni Ca-3 appeared in 1913. The first time these were used on a bombing raid in the First World War was on 20th August 1915.

Caproni Ca-3 - Spartacus Educational
The Caproni Ca.3 was an Italian heavy bomber of World War I and the postwar era. It was the definitive version of the series of aircraft that began with the Caproni Ca.1 in 1914. It was a three-engined biplane of wooden construction, with a fabric-covered frame. The crew of four were placed in an open central nacelle (front gunner, two pilots and rear gunner-mechanic). The rear gunner manned ...

"Military Aircraft, Origins to 1918: An Illustrated History of Their Impact" is a detailed, authoritative exploration of the role and development of military aviation, from its beginnings to the conclusion of World War I. Military history scholar Justin Murphy carefully illustrates the impact of aircraft on military warfare, examines the different types of aircraft, and includes a wealth of photographs and descriptions. Organized thematically, the work covers everything from the origins of military aviation and the impact of aircraft on World War I to the role of reconnaissance missions, auxiliary aircraft, fighters, and bombers. Each chapter highlights key individuals, advancements in aviation technology, industrial organization and aircraft production, and the influence of aircraft on military tactics and strategy. Murphy also demonstrates how aircraft contributed to the development of total war and blurred the lines that had traditionally separated combatants and noncombatants.

Traces the history of bombers, from World War II to the present.

Written by more than 100 international scholars and experts, this encyclopedia chronicles the individuals, equipment, and drama of nearly a century of aerial combat.

During the twentieth century, civil and military aviation has played a prominent role in the history and development of Washington. Commercial operators have exploited the advantages offered by aircraft to overcome the unique challenges of geography and climate. By virtue of Washington ' s strategic location on the continent ' s northwest flank looking out over the Pacific and facing Russia, a wide variety of military aircraft have been based there through the years. The list of military aircraft types that made up the tapestry of Washington aviation is as extensive as the list of legendary figures who have contributed to its amazing history. While most of the military aircraft types no longer grace the airspace over Washington, many can be viewed in their former splendor as they stand as gate guards or museum exhibits. This booklet provides a comprehensive guide to where these restored aircraft can be found. Complementary the details concerning aircraft specifications and roles, the author has included many facts. Finally, the descriptions of the recovery, restoration and preservation efforts stand as a tribute to the many volunteers who have devoted time, energy and financial support to ensure this rich heritage is preserved.

A complete listing of the Indian Army's 1914-1918 Cavalry regiments, Infantry battalions, Mountain Artillery batteries, and Sappers & Miners units including service dates, stations, formation under which served, and campaign. From original records of the period.
