(q) “ CSA B51 code ” means the Canadian Standards Association standard B51-03 Boiler, Pressure Vessel, and Pressure Piping Code adopted pursuant to clause 10(1)(a);

~~Boiler and Pressure Vessel Regulations~~

Both Canada and the United States use the ASME Section VIII-1 code for pressure vessel construction but Canada has a CSA B51 standard that provides a more restrictive definition of what a PRESSURE VESSEL is. Canada also registers FITTINGS – items that in other countries would be considered too small to need registering.

Ghana is on a strong trajectory toward solidifying its middle income status. Today, more children than at any time in the history of Ghana have access to basic and secondary education. Over the past decade, incidence of extreme poverty has been cut in half amid strong economic growth. Ghana's recent achievements point to the possibility of more fully realizing the human potential of all individuals and of the country. Basic Education beyond the Millennium Development Goals in Ghana argues that realizing this potential requires a redoubling of efforts to reach the poorest half of Ghanaian children with quality basic education. At present, system-wide disparities in education service delivery and highly inequitable allocation of resources has led to unfair educational outcomes. These disparities create a "missing middle" in terms of learning outcomes: although a small number of children perform well on numeracy and literacy assessments, more than 60% of 6th graders do not attain proficiency levels. Several recent initiatives point to the possibility of accelerating Ghana's progress toward quality basic education for all: they improve equitable resource allocation, strengthen social protection, and provide additional academic support to improve learning outcomes. By outlining key challenges and promising practices, Basic Education beyond the Millennium Development Goals in Ghana seeks to stimulate a lively and productive debate on the future of basic education in Ghana.

With over 35 practical example problems and solutions, and over 30 ASME code interpretations--referenced and explained--this book goes beyond what engineers need to know about codes for designing, manufacturing, and installing mechanical devices. Coverage of both 1998 ASME Section VII Div. 1 and 1999 Addenda to the ASME code.

This is the fifth edition of CSA C22.3 No. 7, Underground systems, one of a series of Standards issued under the Canadian Electrical Code, Part III. It supersedes the previous editions published in 2010, 2006, 1994, and 1986.

Aline Leon In the last years, public attention was increasingly shifted by the media and world governments to the concepts of saving energy, reducing pollution, protecting the environment, and developing long-term energy supply solutions. In parallel, research funding relating to alternative fuels and energy carriers is increasing on both national and international levels. Why has future energy supply become such a matter of concern? The reasons are the problems created by the world's current energy supply system which is mainly based on fossil fuels. In fact, the energy stored in hydrocarbon-based solid, liquid, and gaseous fuels was, is, and will be widely consumed for internal combustion engine-based transportation, for electricity and heat generation in residential and industrial sectors, and for the production of fertilizers in agriculture, as it is convenient, abundant, and cheap. However, such a widespread use of fossil fuels by a constantly growing world population (from 2.3 billion in 1939 to 6.5 billion in 2006) gives rise to the two problems of oil supply and environmental degradation. The problem related to oil supply is caused by the fact that fossil fuels are not renewable primary energy sources: This means that since the first barrel of petroleum has been pumped out from the ground, we have been exhausting a heritage given by nature.
