Bring the outside inside the classroom using Learning about Fishes for grades 4 and up! This 48-page book covers classification, appearance, adaptations, and endangered species. It includes questions, observation activities, crossword puzzles, research projects, study sheets, unit tests, a bibliography, and an answer key.

A teacher's guide and resource book for designing and conducting live animal activities that are non-invasive and observation-oriented.

Bring the outside inside the classroom using Learning about Fishes for grades 4 and up! This 48-page book covers classification, appearance, adaptations, and endangered species. It includes questions, observation activities, crossword puzzles, research projects, study sheets, unit tests, a bibliography, and an answer key.

All mammals share certain characteristics that set them apart from animal classes. But some mammals live on land and other mammals spend their lives in water—each is adapted to its environment. Land mammals breathe oxygen through nostrils but some marine mammals breathe through blowholes. Compare and contrast mammals that live on land to those that live in the water.

Biology is the study of life, and all the wonderful, squishy, messy parts that living things are made of. And children love messy science, especially hands-on experimentation! Junk Drawer Biology will demonstrate that you don't need high-tech equipment to make learning fun—just what you can find in your recycling bin and around the house. Aspiring doctors can build a model of human lungs with balloons and a soda bottle, and a homemade stethoscope with tubing and plastic lid. Budding gardeners will germinate beans and explore how leaves "breathe" and "sweat." And all ages will enjoy a double helix made of candy. Science educator Bobby Mercer provides readers with hands-on experiments to explain the building blocks of living matter for children of all ages. The projects can be modified to meet the skill levels of the children doing them, from elementary school kids to teenagers. Though each challenge includes suggested materials and one step-by-step, illustrated solution, children are encouraged to think further come up with more questions to answer. Educators and parents will find this title a handy resource to teach children while having a lot of fun.

Fishes of the Minnesota Region was first published in 1982. Minnesota Archive Editions usss digital technology to make long-unavailable books once again accessible, and are published unaltered from the original University of Minnesota Press editions. From Northern Pike to the Walleye, this is the definitive guide to all of Minnesota's 149 kinds of fishes. Illustrated with over 80 color photographs, this book will appeal to enthusiastic anglers as well as curious naturalists. Along with a guide to identification, the authors cover habitat, distribution, conservation, and even some recipes. If you catch a fish from one of Minnesota's 10,000 lakes you'll find a description of it in this book.

There has been a long-standing interest in improving Best Management Practice (BMP) monitoring within and among states. States monitoring the implementation and effectiveness of BMPs for forest operations take a variety of approaches. This creates inconsistencies in data collection and how results are reported. Since 1990 attempts have been made to develop a consistent BMP reporting methodology; the attempts have met with varying degrees of success, utility, and acceptance. Traditional monitoring focused on individual BMPs in terms of prescriptive guidelines, but this approach created inconsistent monitoring methodologies. To improve consistency and allow a more universal method for BMP monitoring, the approach to developing the protocol, described herein, focuses on the underlying S2principlesS3 which guide the design and applicability of BMPs. Shifting emphasis to the underlying principles facilitates outcome or performance-based monitoring of BMPs, which is a more universal, less subjective, and more direct means of evaluating BMP performance for protecting water quality. In turn, repeatability is improved. In this paper we discuss the development process and initial testing of a consistent repeatable BMP monitoring protocol for timber harvesting activities adjacent to water bodies. The protocol could be applied across much of the United States.

This book is an identification guide to fishes in Florida's fresh waters with outstanding color photographs and dot distribution maps for each species.
