This study fills a gap in standardization literature. It is the first academic analysis of national standardization organizations. These organizations exist in every country and may be private or governmental organizations. The first national standardization th organizations were founded in the early decades of the 20 century and were aimed at rationalizing industrial production. Their mode of operation reflects the sense of co operation at the national level and - in the telecommunications and electrotechnical field - at the internationallevel as well. Now, however, the scene has changed, with companies operating internationally. Standards for products, processes, and services are crucial factors in determining success or failure on a fiercely competitive market, especially when functional compatibility is a prerequisite, as is the case in computer and telecommunications technologies. As a consequence, rather homogeneous needs of participants in standardization have given way to conflicting interests. This prompts a discussion about the traditional role of national standardization organizations. They increasingly depend on their exclusive links to the international standardization organizations ISO and IEC, and, in the case of Europe, the regional organizations CEN and CENELEC. In many cases, formal standardization organizations are not the obvious bodies for developing standards to meet business needs. Is this inevitable or could they improve performance and regain their market share? Henk de Vries answers this question against the background of current developments in standardization at the international, European, and national levels.

Substation Automation Systems: Design and Implementation aims to close the gap created by fast changing technologies impacting on a series of legacy principles related to how substation secondary systems are conceived and implemented. It is intended to help those who have to define and implement SAS, whilst also conforming to the current industry best practice standards. Key features: Project-oriented approach to all practical aspects of SAS design and project development. Uniquely focusses on the rapidly changing control aspect of substation design, using novel communication technologies and IEDs (Intelligent Electronic Devices). Covers the complete chain of SAS components and related equipment instead of purely concentrating on intelligent electronic devices and communication networks. Discusses control and monitoring facilities for auxiliary power systems. Contributes significantly to the understanding of the standard IEC 61850, which is viewed as a "black box" for a significant number of professionals around the world. Explains standard IEC 61850 – Communication networks and systems for power utility automation – to support all new systems networked to perform control, monitoring, automation, metering and protection functions. Written for practical application, this book is a valuable resource for professionals operating within different SAS project stages including the: specification process, contracting process, design and engineering process, integration process, testing process and the operation and maintenance process.

Aufgrund des heute verbreiteten teamorientierten Arbeitens wird der Ingenieur in Entwicklung und Konstruktion mehr und mehr in den Planungs-, Beschaffungs- und Produktionsprozess involviert. Zur Bewältigung dieser Aufgaben braucht er neue Methoden der Entscheidungsunterstützung und der Informationsbeschaffung, da die herkömmlichen Ansätze des Produktdatenmanagements nicht ausreichend sind. Neue Strategien für das Product Lifecycle Management enthalten zusätzliche Funktionsumfänge zur Unterstützung der unternehmensinternen und -externen Zusammenarbeit von Entwicklungspartnern, des Supply Chain Prozesses, des Product Portfolio Management und des Customer Needs Management. Das Buch unterstützt die Planung, Entscheidungsfindung und Einführung geeigneter Lösungskonzepte.

This part of GB/T 1 specifies the standard structure, drafting expression rules, layout format, gives the relevant expression style. This part applies to the preparation of national standards, industry standards and local standards, as well as national standardization guidance technical documents. The preparation of other standards can refer to it for use.

Die Dokumentation im verfahrenstechnischen Anlagenbau wird immer wichtiger und aufwändiger – sie macht bis zu 10 Prozent des Anlagenwertes aus. In diesem Buch werden die verschiedenen Aspekte der verfahrenstechnischen Dokumentationen erstmals systematisiert und praxisbezogen erörtert. Es dient als Leitfaden für Führungs- und Fachkräfte, die in Fertigung oder Montage, in Behörden oder Technischen Überwachungsorganisationen mit Dokumenten zu verfahrenstechnischen Anlagen zu tun haben. Mit zahlreichen Checklisten, Beispielen und Musterdokumenten.

BIM ist die Methode der Zukunft, so viel ist unstrittig. Doch BIM ist durchaus schon in der Gegenwart angekommen. Das gilt auch für den Einsatz von BIM in der TGA. Nirgends sonst lassen sich Prozesse so ganzheitlich und gezielt ansteuern und ist übergreifende Kommunikation möglich. Der Sprung zur Anwendung von BIM ist nicht nur einer von 2D zu 3D, sondern in eine ganze neue Welt der Vernetzung. BIM bietet in der TGA erhebliche Potenziale, die den Umstieg auf die Methode rechtfertigen. Das vorliegende Buch enthält grundlegende Informationen zu Themen wie Referenzkennzeichnung und den Systemen der Technischen Gebäudeausrüstung, sowie deren Dokumentation in Planung, Ausführung und Betrieb aus informationstechnischer Sicht. Der Referenzkennzeichnung kommt dabei eine besondere Rolle zu: Sie bildet die methodische Grundlage für das Engineering mittels BIM. Sie ermöglicht die Verwaltung und Dokumentation von technischen Objekten und gibt Informationen zu den Objekten und ihren Relationen. In der hier vorliegenden 3. Auflage von „BIM und TGA“ wurden die Inhalte überarbeitet und an den aktuellen Stand der Technik angepasst. Einige Punkte wurden vertieft, und neue Praxisbeispiele hinzugefügt. „BIM und TGA“ ist ein handlicher Ratgeber, der keine Fragen zum Thema Building Information Modeling in der Technischen Gebäudeausrüstung offen lässt, und der das spezifische Know-how in leicht verständlicher und praxisnaher Form vermittelt.
