the social sciences. Comprising step-by-step instructions and practical advice, this text unravels the complicated aspects of content analysis.

This title was first published in 2003. Assisted conception is an area where it often seems that all the ethical and legal issues have been covered and then technology advances and the discussions start all over again. The book is an anthology of papers presented during a project looking at

theapeutic research in assisted conception (TRAC). It is divided into three areas addressing research, ethics and law. Each chapter begins with an overview of the issues, with the aim being to present new perspectives rather than covering old ground. The European Convention on Human rights and Biomedicine came into force on December 1, 1999. The Convention allows thearapeutic research and research on spare embryos but forbid fundamental research, which may be essential to the safe development of new techniques. This also means that people may become part of an experimental process

without their consent. The project brings together clinicians, embryologists, lawyers and ethicists to ascertain whether there might be a risk of infertility patients being exposed to insufficiently tested procedures and to see if there is a need for fundamental research in this area. It also looks at the legislative safeguards that exist and whether a European standard for treatment should be set.

communications. In the U.S. Army the Signal Corps is the agency charged with developing, procuring, and furnishing signal equipment to overcome the difficulties mentioned above. In an age of swift and startling progress in electronics, this phase of its mission demands that it keep abreast of scientific advances at home and abroad and maintain close ties with civilian laboratories and industry in order to take advantage of their capabilities. This volume traces the course which the Signal Corps followed between the first and second world wars, a period of planning and preparation. Others to follow

will recount the testing of the Corps' organization and equipment, and the results achieved at home and overseas. The author has dealt with the subject on a chronological basis, instead of following the topical treatment used in other technical service volumes. This broad-front approach has enabled him to weave into one pattern the many activities in which the Signal Corps was simultaneously engaged. The reader can here follow from birth the history of Army radar and mobile radio, the first steps taken in the conversion of the civilian communications industry to war production, the expansion of

training facilities, and the beginnings of the far-flung communications network that eventually encircled the globe. He will see the uncertainties of planning and the difficulties of organization incident to rapidly changing conditions, meager appropriations, and the clash of interest within the military household. These and many other matters showing human beings and institutions under pressure are replete with significance to us who must live in a turbulent world where revolution tends to have the upper hand over evolution.
