Medical Assisting Online is a ready-to-use online course that coordinates with Kinn's The Medical Assistant, 10th Edition. In this unique online world, you'll report for work to a fictitious medical practice, complete with virtual co-workers, physicians, and patients. With the help of an online mentor, you will be challenged to perform essential functions of the front and back office such as checking in patients, filing insurance claims, taking vital signs, administering medications, and much more. This "on-the-job" experience helps you apply the skills and concepts presented in the text to real-life practice scenarios. Along the way, you'll have the opportunity to test your understanding of important topics and improve your skills through valuable advice and feedback. Engaging Training Activities cover key curriculum competencies, guiding you step-by-step through important skills and encouraging you try them on your own. Self-comprehension questions and learning activities interspersed throughout allow you to check your comprehension and learn from feedback. Self-evaluation checklists at the end of each lesson help you review key objectives and check off the items you've mastered. Pop-up boxes provide further explanations, forms, or oversized figures, enabling you to "dig deeper" and see the tools and paperwork actually used on the job. Learning objectives are clearly stated at the beginning of each lesson, and revisited throughout in case you need more information on any topic. Ethical, legal, and communication-related considerations are addressed where appropriate, demonstrating how these issues can arise in many contexts and helping you decide the best course of action in a given situation. Automatically scored quizzes and exams help you evaluate your comprehension and check your grade at any time throughout the course. A glossary of definitions with audio pronunciations is linked to the appearance of each term, helping you learn the correct definitions in context. "Lounge Talk" allows you to review important concepts with your online mentor after completing each lesson. Discussion threads, chat rooms, and other communications tools help foster online collaboration with other students and the instructor.

Amstat News asked three review editors to rate their top five favorite books in the September 2003 issue. Methods of Multivariate Analysis was among those chosen. When measuring several variables on a complex experimental unit, it is often necessary to analyze the variables simultaneously, rather than isolate them and consider them individually. Multivariate analysis enables researchers to explore the joint performance of such variables and to determine the effect of each variable in the presence of the others. The Second Edition of Alvin Rencher's Methods of Multivariate Analysis provides students of all statistical backgrounds with both the fundamental and more sophisticated skills necessary to master the discipline. To illustrate multivariate applications, the author provides examples and exercises based on fifty-nine real data sets from a wide variety of scientific fields. Rencher takes a "methods" approach to his subject, with an emphasis on how students and practitioners can employ multivariate analysis in real-life situations. The Second Edition contains revised and updated chapters from the critically acclaimed First Edition as well as brand-new chapters on: Cluster analysis Multidimensional scaling Correspondence analysis Biplots Each chapter contains exercises, with corresponding answers and hints in the appendix, providing students the opportunity to test and extend their understanding of the subject. Methods of Multivariate Analysis provides an authoritative reference for statistics students as well as for practicing scientists and clinicians.

Designed to accompany Lippincott Williams & Wilkins' Clinical Medical Assisting, Third Edition, this student study guide includes perforated skill performance evaluation forms; chapter outlines and learning objectives; matching, multiple-choice and critical thinking exercises; patient teaching exercises; and learning self-assessment exercises.

There's no better way to get ready for your Medical Assisting certification exam! With some 2,500 practice questions and customized online tests, Elsevier's Medical Assisting Exam Review, 5th Edition provides complete preparation for all six certification exams — the CMA, RMA, CMAS, CCMA, CMAA, and CMAC. An illustrated, outline format makes it easy to review key medical assisting concepts and competencies, including anatomy and physiology, medical terminology, diseases and disorders, and administrative and clinical tasks. Written by medical assisting educator Deborah Holmes, this review includes answers and rationales for each question to help you strengthen any weak areas and prepare effectively for your certification exam. UNIQUE! Six certification exams are covered: the CMA (AAMA), RMA (AMT), CMAS (AMT), CCMA (NHA), CMAA (NHT), and CMAC (AMCA). Convenient, easy-to-follow outline format provides at-a-glance review of the subject areas typically found on certification exams for Medical Assisting. Complete test preparation includes three pretests — administrative, clinical, and general — as well as a comprehensive posttest, with answers and rationales for all questions. Study tips and test-taking strategies provide advice and insight into preparing effectively for your certification exam. Hundreds of additional practice questions are included on the Evolve companion website, along with flash cards and A&P animations, to boost your exam readiness and test-taking confidence. An essential textbook for any student or researcher in biology needing to design experiments, sample programs or analyse the resulting data. The text begins with a revision of estimation and hypothesis testing methods, covering both classical and Bayesian philosophies, before advancing to the analysis of linear and generalized linear models. Topics covered include linear and logistic regression, simple and complex ANOVA models (for factorial, nested, block, split-plot and repeated measures and covariance designs), and log-linear models. Multivariate techniques, including classification and ordination, are then introduced. Special emphasis is placed on checking assumptions, exploratory data analysis and presentation of results. The main analyses are illustrated with many examples from published papers and there is an extensive reference list to both the statistical and biological literature. The book is supported by a website that provides all data sets, questions for each chapter and links to software.

Multiple sclerosis is a chronic and often disabling disease of the nervous system, affecting about 1 million people worldwide. Even though it has been known for over a hundred years, no cause or cure has yet been discovered-but now there is hope. New therapies have been shown to slow the disease progress in some patients, and the pace of discoveries about the cellular machinery of the brain and spinal cord has accelerated. This book presents a comprehensive overview of multiple sclerosis today, as researchers seek to understand its processes, develop therapies that will slow or halt the disease and perhaps repair damage, offer relief for specific symptoms, and improve the abilities of MS patients to function in their daily lives. The panel reviews existing knowledge and identifies key research questions, focusing on: Research strategies that have the greatest potential to understand the biological mechanisms of recovery and to translate findings into specific strategies for therapy. How people adapt to MS and the research needed to improve the lives of people with MS. Management of disease symptoms (cognitive impairment, depression, spasticity, vision problems, and others). The committee also discusses ways to build and financially support the MS research enterprise, including a look at challenges inherent in designing clinical trials. This book will be important to MS researchers, research funders, health care advocates for MS research and treatment, and interested patients and their families.
