This book offers a practical and reliable approach to how an organization can move beyond all of the separate initiatives and hype associated with sustainability. It shows how to build in what is already in place, in order to create a sense of stewardship that protects the environment, creates a sense of social well-being, and shared value within the organization.

This handbook was designed to provide up-to-date and practical guidance on national health planning and strategizing for health. It establishes a set of best practices to support strategic plans for health and represents the wealth of experience accumulated by WHO on national health policies, strategies, and plans (NHPSPs). WHO has been one of the leading organizations to support countries in the development of NHPSPs. The focus on improving plans has grown in recent years in recognition of the benefits of anchoring a strong national health sector in a written vision based on participation, analysis, and evidence.

Now in its third edition, this multi-volume Encyclopedia of Management, has been revised and updated to chart the major developments that have occurred in: digital technologies; ethics and governance-related issues; innovation; emerging markets; organizational networks; and new avenues of sustainable business growth. Providing comprehensive coverage of the field of management the encyclopedia spans thirteen subject volumes plus and index, providing a landmark work of reference for scholars, students and professionals. New to this edition: Technology & Innovation Management , Volume 13, V K Narayanan & Gina O'Connor. The encyclopedia is available online through Wiley Online Library, a major database of Journals, Handbooks and reference in the field.

This book presents emerging technology management approaches and applied cases from leading infrastructure sectors such as energy, healthcare, transportation and education. Featuring timely topics such as fracking technology, electric cars, Google's eco-friendly mobile technology and Amazon Prime Air, the volume's contributions explore the current management challenges that have resulted from the development of new technologies, and present tools, applications and frameworks that can be utilized to overcome these challenges. Emerging technologies make us rethink how our infrastructure will look in the future. Solar and wind generation, for example, have already changed the dynamics of the power sector. While they have helped to reduce the use of fossil fuels, they have created management complications due to their intermittent natures. Meanwhile, information technologies have changed how we manage healthcare, making it safer and more accessible, but not without implications for cost and administration. Autonomous cars are around the corner. On-line education is no longer a myth but still a largely unfulfilled opportunity. Digitization of car ownership is achievable thanks to emerging business models leveraging new communication technologies. The major challenge is how to evaluate the relative costs and benefits of these technologies. This book offers insights from both researchers and industry practitioners to address this challenge and anticipate the impact of new technologies on infrastructure now and in the future.

This book proposes that organizational policies are what ensure the institutionalization and sustainability of futures thinking in organizations. It presents several case studies from corporations and other institutions that describe effective use of foresight methods and internal policies to respond to rapid change. The case studies address changing trends in technology, globalization and/or workforce diversity, and the impact on the economic and political well-being of the organization. The editors also develop an organizational capability maturity model for futures thinking as well as providing questions for discussion that promote critical review of each case chapter. This book will inform scholars and organizational leaders how best to utilize foresight methodologies and organizational policies to sustain successful management strategies within futures thinking organizations. Chapter 9 is available open

access under a Creative Commons Attribution 4.0 International License via link.springer.com.

Based on his extensive experience in international librarianship, Peter Johan Lor, South Africa's first National Librarian and a former Secretary General of the IFLA, has written the first comprehensive and systematic overview of international and comparative librarianship. His book provides a conceptual framework and methodological guidelines for the field and covers the full range of international relations among libraries and information services, with particular attention to the international political economy of information, the international diffusion of innovations and policy in library and information services, LIS development and international aid. It concludes with a discussion of the practical relevance and future of international and comparative studies in LIS.

This volume analyses the issues surrounding employment today and explores the challenges that lie at the heart of the workplace. This second edition has been thoroughly revised and updated.

This second edition laboratory manual was written to accompany Food Analysis, Fourth Edition, ISBN 978-1-4419-1477-4, by the same author. The 21 laboratory exercises in the manual cover 20 of the 32 chapters in the textbook. Many of the laboratory exercises have multiple sections to cover several methods of analysis for a particular food component of characteristic. Most of the laboratory exercises include the following: introduction, reading assignment, objective, principle of method, chemicals, reagents, precautions and waste disposal, supplies, equipment, procedure, data and calculations, questions, and references. This laboratory manual is ideal for the laboratory portion of undergraduate courses in food analysis.

Universal basic income (UBI) is emerging as one of the most hotly debated issues in development and social protection policy. But what are the features of UBI? What is it meant to achieve? How do we know, and what don't we know, about its performance? What does it take to implement it in practice? Drawing from global evidence, literature, and survey data, this volume provides a framework to elucidate issues and trade-offs in UBI with a view to help inform choices around its appropriateness and feasibility in different contexts. Specifically, the book examines how UBI differs from or complements other social assistance programs in terms of objectives, coverage, incidence, adequacy, incentives, effects on poverty and inequality, financing, political economy, and implementation. It also reviews past and current country experiences, surveys the full range of existing policy proposals, provides original results from micro†“tax benefit simulations, and sets out a range of considerations around the analytics and practice of UBI.

How can we be happier, healthier and more satisfied in life? This edited collection examines various dimensions of wellbeing among older people, including its measurement; social, environmental and economic determinants; and how research can be translated into policy to improve quality of life for older people. With an increasingly ageing population across countries and an increasing population of older adults, there is growing interest in improving older people's ability to live healthily and happily. With a focus on retirement and aged care, this book is important reading for those interested in Welfare Economics, Health Economics and Development.
