Care Act and the creation of the Center for Medicare and Medicaid Innovation -- the national health care debate is too often poisoned by negativity. A quieter, more thoughtful, and vastly more constructive conversation continues among health care leaders and professionals throughout the country. Innovative solutions are being designed and implemented at the local level, and countless health care organizations are demonstrating breakthrough remedies to some of the toughest and most expensive challenges in health care. Pursuing the Triple Aim shares compelling stories that are emerging in locations ranging from Pittsburgh to Seattle, from Boston to Oakland, focused on topics including improving quality and lowering costs in primary care; setting challenging goals to control chronic disease with notable outcomes; leveraging employer buying power to improve quality, reduce waste, and drive down cost; paying for care under an innovative contract that compensates for quality rather than quantity; and much more. The authors describe these innovations in detail, and show the way toward a health care system for the nation that improves the experience and quality of care while at the same time controlling costs. As the Triple Aim moves from being largely an aspirational framework to something that communities all across the US can implement and learn from, its potential to become a touchstone for the work ahead has never been greater. Pursuing the Triple Aim lays out the vision, the interventions, and promising examples of success.

This new edition of this bestselling guide offers an integrated approach to process improvement that delivers quick and substantial results in quality and productivity in diverse settings. The authors explore their Model for Improvement that worked with international improvement efforts at multinational companies as well as in different industries such as healthcare and public agencies. This edition includes new information that shows how to accelerate improvement by spreading changes across multiple sites. The book presents a practical tool kit of ideas, examples, and applications.

The overwhelming majority of a software system's lifespan is spent in use, not in design or implementation. So, why does conventional wisdom insist that software engineers focus primarily on the design and development of large-scale computing systems? In this collection of essays and articles, key members of Google's Site Reliability Team explain how and why their commitment to the entire lifecycle has enabled the company to successfully build, deploy, monitor, and maintain some of the largest software systems in the world. You'll learn the principles and practices that enable Google engineers to make systems more scalable, reliable, and efficient—lessons directly applicable to your organization. This book is divided into four sections: Introduction—Learn what site reliability engineering is and why it differs from conventional IT industry practices Principles—Examine the patterns, behaviors, and areas of concern that influence the work of a site reliability engineer (SRE) Practices—Understand the theory and practice of an SRE's day-to-day work: building and operating large distributed computing systems Management—Explore Google's best practices for training, communication, and meetings that your organization can use

Promising Care: How We Can Rescue Health Care by Improving It collects 16 speeches given over a period of 10 years by Donald M. Berwick, an internationally acclaimed champion of health care improvement throughout the course of his long and storied career as a physician, health care educator and policy expert, leader of the Institute for Healthcare Improvement (IHI), and administrator of the Centers for Medicare & Medicaid Services. These landmark speeches (including all of Berwick's speeches delivered at IHI's annual National Forum on Quality Improvement in Health Care from 2003 to 2012) clearly show why our medical systems don't reliably contribute to our overall health. As a remedy he offers a vision for making our systems better – safer, more effective, more efficient, and more humane. Each of Berwick's compelling speeches is preceded by a brief commentary by a prominent figure in health care, policy, or politics who has a unique connection to that particular speech. Contributors include such notables as Tom Daschle, Paul Batalden, and Lord Nigel Crisp. Their commentaries reflect on how it felt to hear the speech in the context in which it was delivered, and assess its relevance in today's health care environment. The introduction is by Maureen Bisognano, CEO of Institute for Healthcare Improvement, and author of Pursuing the Triple Aim. Praise for previous books by Don Berwick Curing Health Care: "The book is an easy and affirming read for anyone who is familiar with and has used the TQM teachings of Dr. Joseph M. Juran and Dr. W. Edwards Deming and would be a simple and informative introduction to the concepts for anyone who has been hearing about TQM but has no idea what it is all about and wants to know more." —Permanent Fixes (blog) "Donald Berwick is the most clearly heard evangelist of applying industrial methods of continuous quality improvement in health care." —Annals of Internal Medicine Escape Fire: "With an effective blend of common sense, real-life stories, persuasive metaphors, and out-of-the-box thinking, Dr. Berwick's presentations make for fascinating reading for anyone interested in improving America's \$1.7 trillion health care system." —Piper Report "Anyone interested in change in the healthcare system would enjoy this book. In degree programs, the various speeches would be useful for discussion in a health policy readings course." —The Annals of Pharmacotherapy

This is the story of the Singapore healthcare system: how it works, how it is financed, its history, where it is going, and what lessons it may hold for national health systems around the world. Singapore ranks sixth in the world in healthcare outcomes, yet spends proportionally less on healthcare than any other high-income country. This is the first book to set out a comprehensive system-level description of healthcare in Singapore, with a view to understanding what can be learned from its unique system design and development path. The lessons from Singapore will be of interest to those currently planning the future of healthcare in emerging economies, as well as those engaged in the urgent debates on healthcare in the wealthier countries faced with serious long-term challenges in healthcare financing. Policymakers, legislators, public health officials responsible for healthcare systems planning, finance and operations, as well as those working on healthcare issues in universities and think tanks should understand how the Singapore system works to achieve affordable excellence.

Praise for How Learning Works "How Learning Works is the perfect title for this excellent book. Drawing upon new research in psychology, education, and cognitive science, the authors have demystified a complex topic into clear explanations of seven powerful learning principles. Full of great ideas and practical suggestions, all based on solid research evidence, this book is essential reading for instructors at all levels who wish to improve their students' learning." —Barbara Gross Davis, assistant vice chancellor for educational development, University of California, Berkeley, and author, Tools for Teaching "This book is a must-read for every instructor, new or experienced. Although I have been teaching for almost thirty years, as I read this book I found myself resonating with many of its ideas, and I discovered new ways of thinking about teaching." —Eugenia T. Paulus, professor of chemistry, North Hennepin Community College, and 2008 U.S. Community Colleges Professor of the Year from The Carnegie Foundation for the Advancement of Teaching and the Council for Advancement and Support of Education "Thank you Carnegie Mellon for making accessible what has previously been inaccessible to those of us who are not learning scientists. Your focus on the essence of learning combined with concrete examples of the daily challenges of teaching and clear tactical strategies for faculty to consider is a welcome work. I will recommend this book to all my colleagues." —Catherine M. Casserly, senior partner, The Carnegie Foundation for the Advancement of Teaching "As you read about each of the seven basic learning principles

in this book, you will find advice that is grounded in learning theory, based on research evidence, relevant to college teaching, and easy to understand. The authors have extensive knowledge and experience in applying the science of learning to college teaching, and they graciously share it with you in this organized and readable book." —From the Foreword by Richard E. Mayer, professor of psychology, University of California, Santa Barbara; coauthor, e-Learning and the Science of Instruction; and author, Multimedia Learning

Spanning a decade (1992-2002), these speeches echo the theme that our health care system needs fundamental change and a revolutionary new design. Throughout the book, Berwick identifies innovations and ideas from a number of surprising sources—a girls' soccer team, a sinking ship, and the safety standards at NASA. *Escape Fire* takes its title from the 1949 Mann Gulch tragedy in which thirteen young firefighters were trapped in a wildfire on a Montana hillside. The firefighter's leader, Wag Dodge, devised a creative solution for avoiding the encroaching fire. He burned a patch of grass and lay down in the middle of the scorched earth. His team refused to join him, and most perished in the fire. Dodge survived. Berwick applies the lessons learned from the catastrophe to our ailing health care system—we must not let ingrained processes obstruct life-saving innovation. Not content to simply define the problems with our flawed system, Berwick outlines new designs and suggests practical tools for change: name the problem, build on success, take leaps of faith, look outside of the medical field, set aims, understand systems, make action lists, and—the most fundamental of all—never lose sight of the patient as the central figure.

Based on official army records, these eyewitness accounts of seven hellacious battles serve as a brief history of the Vietnam conflict. From a fierce fight on the banks of the Ia Drang River in 1965 to a 1968 gunship mission, this illustrated report conveys the heroism and horror of warfare.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

The Affordable Care Act, landmark health legislation passed in 2010, called for the development of the National Prevention Strategy to realize the benefits of prevention for all Americans; health. This Strategy builds on the law's efforts to lower health care costs, improve the quality of care, and provide coverage options for the uninsured. Contents: Nat. Leadership; Partners in Prevention; Healthy and Safe Community Environ.; Clinical and Community Preventive Services; Elimination of Health Disparities; Priorities: Tobacco Free Living; Preventing Drug Abuse and Excessive Alcohol Use; Healthy Eating; Active Living; Injury and Violence Free Living; Reproductive and Sexual Health; Mental and Emotional Well-being.
