Fasting Ramadan For The First Time ? | Non-Muslim Vlog 2020 ~~Ramadan Fasting And Educational Outcomes~~

If fasting is the main mechanism through which Ramadan affects academic performance, our results are informative about the relation between nutrition and educational outcomes. Based on previous research, we hypothesize that observing Ramadan, and especially observing the fast, will have a negative impact on participants' academic achievement.

~~Ramadan, fasting and educational outcomes - ScienceDirect~~

For identification we exploit that the number of Ramadan weeks during the course that we study, varies from year to year, ranging from zero to four. Our main finding is that Ramadan observance has a negative impact on performance; one additional Ramadan week lowers the final grade of Muslim students by almost 10% of a standard deviation.

Outcomes The primary outcome was fasting behaviour, defined as fasting or not fasting. Secondary outcomes of this study were preterm delivery and birth weight as they had previously been reported to be associated with Ramadan fasting [2–4, 8]. Preterm delivery (PTD), was defined as birth before gestational week 37 + 0.

~~Experiences and outcomes of maternal Ramadan fasting~~ ...

This is the major objective of fasting in Ramadan as clarified by the Qur'an. God said, "O you who have believed, decreed upon you is fasting as it was decreed upon those before you that you may become righteous [muttaq?n]."2 Fasting also teaches a person how to have taqw? because while one is fasting they are careful about all kinds of things. They watch what comes out of their mouth, what they look at, and all that they do.

This book examines the challenges that Pakistani-American families have faced in their attempts to assimilate within the U.S. school culture since the September 11 terrorist attack.

In the scientific analysis of religion, the most important distinguishing feature of the economic approach compared to other disciplines is that it has not conflicted with religion, unlike other areas of social science. Especially with the rational choice theory, it is seen that religion and religiosity are the subject of scientific research as a phenomenon that affects the decisions and preferences of the rational individual. In this context, especially in many recent studies, the relationship between religion, religiosity and economic development has been discussed in both ways. Although the impact of religion and religiosity on economic development, or vice versa, the impact of economic development on religion and religiosity has been laid out mainly in researches reflecting the Christian world, this relationship has not been examined much in predominantly Muslim countries, including Turkey. This book examines this two-way effect based on data through a large volume of Turkey sample. In the first chapters, starting from the age of enlightenment, we talk about the adventure of the areas that are the subject of the debate between religion and social sciences, and in the following sections, the answer to many questions in the context of economic analysis of religion is revealed based on data. What is the relationship between individual indicators of development, basic demographics and religiosity? Who are more religious, highly educated or low-educated people? Is there a gender gap in terms of religiosity? Or is age an important variable for religiosity? What is the change in religiosity as the income level rises? What does the comparison of regions with different levels of economic development tell us in terms of religiosity? You will find answers to many such questions on Turkey population and the rest of the world comparatively in this book ...

healthy adult Muslims. Although Islam exempts people with chronic medical conditions from the duty of fasting, many people with diabetes insist on fasting Ramadan despite the medical advice not to. Fasting among people with type 1 & 2 diabetes is associated with multiple risks such as hypoglycemia, hyperglycemia, and others. The practice in Dasman Diabetes Institute is to conduct an annual educational course 2-3 months before the start of the holy month of Ramadan. Aim To evaluated the impact of implementing a structured education program in preventing diabetes associate complications of fasting. Method A customized version of MADAR (Measured Approach for Diabetes and Ramadan) has been adopted, adapted and implemented for this purpose. Educators, nutritionists, nurses and physicians are involved in this program. All participants filled a questionnaire, covering different aspects related to the effect of fasting and diabetes, before and after Ramadan. The course is a one day of 3 hours duration. It consists of two parts; basic diabetes and nutritional concepts. The questionnaire covers a brief medical history and past experience of any complication of fasting in previous months of Ramadan. Confidence rate to manage diabetes outcomes during fasting is also assessed. Results 215 patients, 118 male and 97 female, were invited and accepted to participate in the program. Only 18/215 were T1DM, the remaining 197 were T2DM. The mean age of the participants was 56.1 year. There was a significant improvement of confidence rate to manage diabetes outcomes during fasting. There was 46.9% reduction in hypoglycemic events and an overall improvement in glycemic control by 1.1% of HbA1c. Discussion Ramadan-focused structural diabetes education program can empower patients to change their lifestyle during Ramadan and it reduces the risks associated with fasting in people with diabetes.

Type 1 diabetes, formerly known as juvenile diabetes, is a complex disorder that requires a great deal of patient-guided self-care. In recent years, advances in diabetes treatment have dramatically shifted potential outcomes in the favor of the patient with diabetes. The challenge for health care professionals is to realize this potential through an individualized, flexible, and responsive treatment plan for patients with type 1 diabetes. Now in its seventh edition, *Medical Management of Type 1 Diabetes* offers health care providers the newest information and guidelines for the treatment of type 1 diabetes. Built on the foundation of multiple daily insulin injections and insulin pump therapy, this book guides health care providers in helping their patients continually strive for optimal blood glucose control. This new edition focuses on the latest molecular advances, new treatment methods, recent clinical trials, and the American Diabetes Association's Standards of Care. Key topics also include new insulins and administration protocols, advanced carbohydrate counting, and emphasis on continuing patient education. Individual sections address all of the topics in managing type 1 diabetes, including diagnosis and classification/pathogenesis, diabetes standards and education, tools of therapy, special situations, psychosocial factors affecting adherence, quality of life, and well-being and complications. *Medical Management of Type 1 Diabetes* is an essential addition to any clinician's library for the treatment and understanding of type 1 diabetes.

This book is a complete guide to the diagnosis and management of diabetes. Divided into eight sections, the text begins with an overview of the history, epidemiology and pathogenesis of the disease. The next chapters discuss different types diabetes, diagnosis, managements techniques, and monitoring. The following sections cover chronic and acute complications, and diabetes in special situations such as in pregnancy and during Ramadan. The book concludes with discussion on transplant, gene and stem cell therapy, psychosocial aspects, and public health and economics. The comprehensive text is further enhanced by clinical photographs, diagrams and exhaustive references. Key points Comprehensive guide to diagnosis and management of diabetes Covers different types of diabetes and potential complications Includes discussion on diabetes in special situations such as in pregnancy or during Ramadan Features clinical photographs, diagrams and exhaustive references

## Read Online Ramadan Fasting And Educational Outcomes

Fasting during the holy month of Ramadan is an important spiritual practice for many Muslims. This involves going without food, liquids and even medication between the hours of dawn until sunset, putting people with diabetes at significant risk of hypoglycaemia (low blood glucose), hyperglycaemia (high blood glucose), or dehydration. This book is a guide to the management of patients with diabetes during Ramadan. Beginning with an introduction to the physiology and endocrinology of fasting, the following chapters examine both pharmacological and non-pharmacological treatment options. The final sections are dedicated to management of the condition in different population groups (children, adolescents, the elderly); and management of complications, including hypoglycaemic and hyperglycaemic emergencies, and co-morbid conditions such as hypertension, high cholesterol and cardiovascular disease. Key points Guide to the management of diabetes during Ramadan Discusses both pharmacological and non-pharmacological treatment options Examines management of diabetes for different population groups Includes comprehensive section on complications and their management

Nutrition in the Prevention and Treatment of Abdominal Obesity focuses on the important roles that exercise, dietary changes, and foods play in promoting as well as reducing visceral fat. Nutritionists, dieticians, and healthcare providers seeking to address the abdominal obesity epidemic will use this comprehensive resource as a tool in their long-term goal of preventing chronic diseases, especially heart, vascular, and diabetic diseases. Experts from a broad range of disciplines are involved in dealing with the consequences of excessive abdominal fat: cardiology, diabetes research, studies of lipids, endocrinology and metabolism, nutrition, obesity, and exercise physiology. They have contributed chapters that define a range of dietary approaches to reducing risk and associated chronic diseases. They begin by defining visceral obesity and its major outcomes; they also discuss the importance and the challenges of dietary approaches to reduce abdominal obesity, as compared to clinical approaches, with major costs and risks. Offers detailed, well-documented reviews outlining the various dietary approaches to visceral obesity with their benefits and failures Includes chapters on types of foods, exercise, and supplements in reducing obesity and its chronic clinical companions, especially diabetes and cardiovascular disease Helps nutritionists, dieticians, and healthcare providers approach patients in making decision about nutritional therapies and clinical treatments for abdominal obesity, from an evidence-based perspective

Ramadan fasting is a religious obligation followed annually by Muslims. This practice consists of a total abstinence from some behaviors such as eating, drinking and smoking during the span between dawn and sunset. Studies dealing with the effects of Ramadan were focused on several topics. Most published studies have examined either medical aspects related to fasting during Ramadan or the pattern of features related to sport performance during Ramadan. In this book, the chapters discuss several topics related to the effect of Ramadan on sport performance, training-induced adaptations, Muslims' psychology, sleep, sports nutrition, health and some patients with chronic diseases.

The Oxford Handbook of Economics and Human Biology introduces the scholarly community to the relationship between economic processes and human biology. A society's biological well-being is important if one is to understand numerous aspects of political and economic developments: the outbreak of revolutions; the effect of industrialization and modernization on a population's well-being; the demographic transition; and changes in the degree of social inequality by gender, social class, and geographic location. The contributions in this Handbook examine the various ways the economy affects human biological outcomes and, reciprocally, the impact of the latter on the former both over time and cross-sectionally. Another focus is on biological measures as inputs, such as how height and weight affect labor market outcomes and the role of genetic markers on economic variables. A third purpose is to introduce the reader to developmental aspects and policy, particularly correlates of malnutrition and poverty across the world.
