"To Be " in the Hole..." is to be incarcerated in solitary confinement. "Pencil in the hole" is just that, with nothing but a pencil and some blank paper, a journey began, here one finds both religious and secular expression, both in the artistic expression and the poetic expression. None years in creation, see for yourself the graces of God and the gifts from the fellow human beings that impact, up lift and free the confined soul. Pencil in the Hole is freedom without Liberty's graces.

Each year more than 17 million Americans suffer from a depressive illness, yet few suffer in solitude. How You Can Survive When They're Depressed explores depression from the perspective of those who are closest to the sufferers of this prevalent disorder--spouses, parents, children, and lovers--and gives the successful coping strategies of many people who live with a clinical depressive or manic-depressive and often suffer in silence, believing their own problems have no claim to attention. Depression fallout is the emotional toll on the depressive's family and close friends who are unaware of their own stressful reactions and needs. Sheffield outlines the five stages of depression fallout: confusion, self-doubt, demoralization, anger, and finally, the desire to escape. Many people will find relief in the knowledge that their self-blame, guilt, sadness, and resentment are a natural result of living with a depressed person. Sheffield brings together many real-life examples from the pioneering support group she attends at Beth Israel Medical Center of how people with depression fallout have learned to cope. From setting boundaries to maintaining an outside social life, she gives practical tactics for handling the challenges and emotional stresses on a day-to-day basis.

Polymers, main components of plastics and rubbers, are being discarded in increasing quantities. But this waste can also be considered as 'plastic gold'. Public concern, coupled with the inherent value of the material, means that recycling is imperative. The present book presents a survey of current knowledge in the form of case studies, including current legal and educational issues. Topics covered also include regulation and practice in NATO countries, the economics of recycling, the reprocessing of single polymers and mixtures, and future prospects and strategies. Audience: Vital reading for all polymer scientists, technicians and engineers.
