"The book is composed of giant (frequently larger-than-life-size) photographs of deep-sea creatures: the gelatinous Pandeia rubra, which bears an uncanny resemblance to a police strobe light; the seed-like larvae of the Spantagoid heart urchin, whose appendages stretch at near-perfect right angles; glass octopi like living x-rays, frilled sharks, furry lobsters. In all, nearly 200 creatures, some of which have never been photographed before, many of which are unknown species, all of which ...

~~The Deep: The Extraordinary Creatures of the Abyss: Amazon ...~~

I've been enjoying a gallery book devoted to the extraordinary creatures of the deep sea these past two weeks. Edited by Claire Nouvian, The Deep collects some of the best photography produced by the study of the ocean floor in the last decade, along with pieces by marine biologists and geologists commenting on the submarine ecosystem. The sheer abundance of life on the surface of the Earth boggles the mind, but more than 90% of the planet's estimated biomass is within the oceans.

Provides readers with a large collection of pictures and information on the creatures that live in the deep ocean.

Praise for the first edition: "More than a picture book ... Hoyt's elegant writing provides both the historical background for deep-sea exploration and an ecological perspective on life in the ocean's depths." -- American Scientist "A magnificent bestiary ... and a reminder of how little we actually know about the seas surrounding us." -- Popular Science Winner, Outstanding Nonfiction Book of the Year -- American Society of Journalists and Authors, Inc., New York In this updated and expanded edition of *Creatures of the Deep*, award-winning nature and science writer Erich Hoyt gives readers a glimpse of the amazing variety of creatures found in the deepest parts of the ocean. Weaving together details from the latest scientific research about sharks, giant squid, dragonfish, huge tube worms, clams and tiny microbes of the deep-sea vents, Hoyt embarks on a magical journey roaming across the abyssal plains and descending into deep-sea trenches more than 20,000 feet down. Hoyt unravels the complex predator-prey relationships, from "killer" copepods to battles between giant squid and sperm whales, presenting compelling portraits of animals that are superbly adapted denizens of a dark high-pressure world. There are life forms, independent of sunlight and photosynthesis, which flourish around the hot, sulfurous deep-sea vents in the magnificent rift valley of the mid-ocean ridge, the world's longest mountain range. Surviving in conditions that appear to be close to the very soup of primordial Earth, these microbes have become the basis for the latest research into Earth's origins. Fully illustrated with fantastic underwater imagery.

Provides readers with a large collection of pictures and information on the creatures that live in the deep ocean.

From the authors of *A Gap in Nature*, a breathtaking visual adventure showcasing ninety of the world's most astounding creatures Sumptuous birds of paradise, amazing soft-shell turtles, frogs that look like tomatoes, and terrifying fish (including the deep-water angler fish from *Finding Nemo*) are just some of the extraordinary creatures that can be found in Tim Flannery and Peter Schouten's new book, *Astonishing Animals*. Superbly illustrated in lifelike full-color paintings, *Astonishing Animals* details ninety of the world's most amazing animals from around the world. In this book you will find the Hairy Seadevil, the spectacular Sulawesi Naked Bat, and in the depths of the limestone caves in Slovenia, the Olm, a pink, four-legged, sightless salamander that lives for a hundred years. In fascinating vignettes, Flannery offers the true evolutionary tale of how each of these bizarre creatures came to look the way they do. Alongside each historical account is a stunning hand-painted color reproduction (life-size in the original painting) by Schouten. Filled with purple-faced apes, jagged-toothed dolphins, and antlered lizards, *Astonishing Animals* is a remarkable collection of the world's most incredible creatures and the stories behind their remarkable survival into a modern age.

Plumb the depths of the ocean to see what bizarre creatures lurk there. The monstrous vampire squid is sure to scare, while the aptly-named blobfish will amuse. They are joined by a truly odd roster of sea dwellers. A high-interest spin on life-science topics.

Introduces morays and other types of eels, and describes where they live in the ocean, their different sizes and colors, their predators, what they eat, and how water pollution is affecting the life of eels.

An illustrated look at the weird and wonderful creatures that live in the very deepest parts of the sea. Humans have always wondered, with a mixture of fear and fascination, what lurks beneath the surface in the depths of the ocean. In this book, Erich Hoyt introduces 50 of the oddest creatures you will ever meet in the sea. From the carnivorous comb jelly to the lantern-carrying deep-sea dragonfish, from a vampire squid with giant eyes to dancing jellyfish, Hoyt

explores these peculiar conditions and their equally peculiar environment. These creatures have adapted to lack of light and, using sound pulses (echolocation) or light-producing organs and pigment cells (emitting light via bioluminescence), they are able to communicate without giving their location away to predators. These stunning, captivating photographs weren't taken from the portholes of submarines. Photographers David Shale, Solvin Zanki and Jeff Rotman worked with oceanography institutes, museums and the BBC Natural History Unit, taking long cruises across the ocean to record and try to understand these little-studied residents of the deep sea. To capture the creatures for observation, a net was lowered far beneath the surface. As soon as the trawl was hauled aboard, the photographers would race to transfer the most unusual animals to fresh seawater aquariums in a chilled laboratory on board. These pages let readers gaze into strange, wild eyes and study faces with toothless or crooked smiles that witness the fruits of deep-sea evolution. Informative captions explain what the patterns of lights on their bodies are "saying" to others in their absolutely dark world. The wonder and extraordinary weirdness of what lives in the deep seas, so far away from us and yet so close, will become more familiar with this book.

Swim with sharks! Dive with dolphins! Stroll the beach with penguins! Young readers will joyfully immerse themselves in this awesome adventure at sea, in which stunning National Geographic photos reveal hidden worlds of action and beauty. We meet 30 favorite sea creatures and explore their watery homes: playful dolphins, mysterious sharks, graceful sea turtles, waddling penguins, and dozens of others. Kids will marvel at speedy swimmers on the hunt, and smile at cuddly scenes of animal families. To give background on the attention-grabbing photographs, each page is sprinkled with fun facts and layered with information about ocean wildlife and environments. Age-appropriate text tells each animal's story in language that's accurate, lively, and non-intimidating. National Geographic maps encourage kids to learn about the geography of land and sea. Conservation tips help readers of all ages understand how we can be kind to the oceans. At home in the classroom and on the family bookshelf, is a trove of thrilling sights and discoveries. Timed to coordinate with the release of Disney's much-anticipated movie on Earth Day 2010, this exciting book taps into and encourages new awareness about the world's marine environments.

Audisee® eBooks with Audio combine professional narration and sentence highlighting to engage reluctant readers! Have you ever wondered what mysteries the ocean holds? Prepare to explore the ocean from sunlit shallows to the deepest, darkest depths. Along the way, you'll meet many incredible creatures that are brand new to science. Dive to a coral reef and spot a new species of pygmy octopus. Travel deeper and discover fragile, nearly transparent jellies as they drift past. Then head down into a world of eternal night. You'll encounter animals that make their own light and zombie worms that feast on the bones of dead whales. Your adventure is based on the real journeys of scientists involved in the Census of Marine Life. From 2000 to 2010, more than two thousand researchers from eighty-two countries carried out the most extensive investigation of ocean life ever attempted. Author Rebecca L. Johnson takes readers to research sites around the globe, showing how ocean scientists do their work. Stunning photographs throughout bring readers face-to-face with some of the most mesmerizing creatures on Earth.

When viewed from a quiet beach, the ocean, with its rolling waves and vast expanse, can seem calm, even serene. But hidden beneath the sea's waves are a staggering abundance and variety of active creatures, engaged in the never-ending struggles of life—to reproduce, to eat, and to avoid being eaten. With *Sex, Drugs, and Sea Slime*, marine scientist Ellen Prager takes us deep into the sea to introduce an astonishing cast of fascinating and bizarre creatures that make the salty depths their home. From the tiny but voracious arrow worms whose rapacious ways may lead to death by overeating, to the lobsters that battle rivals or seduce mates with their urine, to the sea's masters of disguise, the octopuses, Prager not only brings to life the ocean's strange creatures, but also reveals the ways they interact as predators, prey, or potential mates. And while these animals make for some jaw-dropping stories—witness the sea cucumber, which ejects its own intestines to confuse predators, or the hagfish that ties itself into a knot to keep from suffocating in its own slime—there's far more to Prager's account than her ever-entertaining anecdotes: again and again, she illustrates the crucial connections between life in the ocean and humankind, in everything from our food supply to our economy, and in drug discovery, biomedical research, and popular culture. Written with a diver's love of the ocean, a novelist's skill at storytelling, and a scientist's deep knowledge, *Sex, Drugs, and Sea Slime* enchants as it educates, entralling us with the wealth of life in the sea—and reminding us of the need to protect it.

A spectacular collection of weird yet real creatures from the darkest depths of the oceans. In this book, readers get a look into the watery deep and find 14 of nature's strangest creatures. Intricately drawn artworks and 200 stunning photographs highlight the extraordinary features of each animal's anatomy and survival tactics, such as bioluminescence to ward off predators and jet propulsion (in one case, jet vomit) to escape quickly. The monsters include deep-sea fish, squid, jellyfish, and microscopic life, such as: Black dragonfish, the inspiration for the parasitic Alien monsters Deep-sea hatchet fish, google-eyed and bioluminescent Deep-sea mussels that use bacterial "fuel cells" to harness energy from hydrothermal vents Deep-sea shrimp that spew bioluminescent vomit to escape predators Eyelight fish turn their "flashlight" eyes off and on while hunting Japanese firefly squid, bioluminescent, whose blue flashes attract small fish on which it feeds Lanternshark, totally bioluminescent in the deep sea Pelican eel, with a comically oversized mouth and a tail so long that it gets tied in knots. *Monsters of the Deep* is an exciting, informative collection that will interest readers of all ages.
