At once a pioneering study of evolution and an accessible and lively reading experience, *The Mating Mind* marks the arrival of a prescient and provocative new science writer. Psychologist Geoffrey Miller offers the most convincing—and radical—explanation for how and why the human mind evolved. Consciousness, morality, creativity, language, and art: these are the traits that make us human. Scientists have traditionally explained these qualities as merely a side effect of surplus brain size, but Miller argues that they were sexual attractors, not side effects. He bases his argument on Darwin ' s theory of sexual selection, which until now has played second fiddle to Darwin ' s theory of natural selection, and draws on ideas and research from a wide range of fields, including psychology, economics, history, and pop culture. Witty, powerfully argued, and continually thought-provoking, *The Mating Mind* is a landmark in our understanding of our own species.

*The Man-ual Part 1* is a collaboration of tips and advice from women of all walks of life on how THEY prefer to be approached by men. Learn the methods that have a higher success rate when you're considering approaching women in real life circumstances. If you ever wished women came with instructions, this may be as close as you're gonna get!

Why does the human brain insist on interpreting the world and constructing a narrative? In this ground-breaking work, Michael S. Gazzaniga, one of the world's foremost cognitive neuroscientists, shows how our mind and brain accomplish the amazing feat of constructing our past—a process clearly fraught with errors of perception, memory, and judgment. By showing that the specific systems built into our brain do their work automatically and largely outside of our conscious awareness, Gazzaniga calls into question our everyday

notions of self and reality. The implications of his ideas reach deeply into the nature of perception and memory, the profundity of human instinct, and the ways we construct who we are and how we fit into the world around us. Over the past thirty years, the mind sciences have developed a picture not only of how our brains are built but also of what they were built to do. The emerging picture is wonderfully clear and pointed, underlining William James's notion that humans have far more instincts than other animals. Every baby is born with circuits that compute information enabling it to function in the physical world. Even what helps us to establish our understanding of social relations may have grown out of perceptual laws delivered to an infant's brain. Indeed, the ability to transmit culture—an act that is only part of the human repertoire—may stem from our many automatic and unique perceptual-motor processes that give rise to mental capacities such as belief and culture. Gazzaniga explains how the mind interprets data the brain has already processed, making "us" the last to know. He shows how what "we" see is frequently an illusion and not at all what our brain is perceiving. False memories become a part of our experience; autobiography is fiction. In exploring how the brain enables the mind, Gazzaniga points us toward one of the greatest mysteries of human evolution: how we become who we are.

Co-written by an author who garners more accolades and rave reviews from instructors and students with each succeeding edition, INTRODUCTION TO PSYCHOLOGY: GATEWAYS TO MIND AND BEHAVIOR, TWELFTH EDITION attracts and holds the attention of even difficult-to-reach students. The Twelfth Edition's hallmark continues to be its pioneering integration of the proven-effective SQ4R learning system (Survey, Question, Read, Reflect, Review, Recite), which promotes critical thinking as it guides students step-by-step to an understanding of psychology's broad concepts and diversity of topics. Throughout every chapter, these active learning tools -- together with the book's example-laced writing style, discussions of positive psychology, cutting-edge coverage of the field's new research findings, and excellent media resources -- ensure that students find the study of psychology fascinating, relevant, and above all, accessible. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

A distinguished psychiatrist and avid gardener presents “ a truly uplifting book on the power of gardening—and how it can change people ’ s lives ” (Stylist, UK). The garden is often seen as a refuge, a place to forget worldly cares, removed from the “ real ” life that lies outside. When we get our hands in the earth we connect with the cycle of life in nature through which destruction and decay are followed by regrowth and renewal. Gardening is one of the quintessential nurturing activities and yet we understand so little about it. The Well-Gardened Mind provides a new perspective on the power of gardening to change people ’ s lives. Here, Sue Stuart-Smith investigates the many ways in which mind and garden can interact and explores how the process of tending a plot can be a way of sustaining an innermost self. Stuart-Smith ’ s own love of gardening developed as she studied to become a psychoanalytic psychotherapist. From her grandfather ’ s return from World War I to Freud ’ s obsession with flowers to case histories with her own patients to progressive gardening programs in such places as Rikers Island prison in New York City, Stuart-Smith weaves thoughtful yet powerful examples to argue that gardening is much more important to our cognition than we think. Recent research is showing how green nature has direct antidepressant effects on humans. “ The most original gardening book ever [that] combines observation, horticulture, literature and history ” (Sunday Times, UK), The Well-Gardened Mind is a book for gardeners and non-gardeners alike, and the perfect solace for people
