This book explores how traditional theories of economic justice, both from the libertarian right and the egalitarian left, have failed to appreciate the objection against exploitative behavior that would be possible through the exercise of property rights. This failure also underlies the recent plea for a so-called unconditional basic income.

The author explores how traditional theories of economic justice, both from the libertarian right and the egalitarian left, have failed to appreciate the objection against exploitative behaviour that would be possible through the exercise of property rights. This underlies the plea for a unconditional basic income.

In 1895 an English farmer diverted the course of a stream that was flowing through his land, thereby cutting off the supply to the water reservoir of the neighboring community. The courts established that it had been his purpose to "injure the plaintiffs by carrying off the water and to compel them to buy him off." Regardless of what the law says, most people will feel that the farmer's intentions were morally unjust; he was trying to abuse his property rights in order to take advantage of others. Yet, as Gijs van Donselaar explains, the major traditions in the theory of economic justice, both from the libertarian right and from the egalitarian left, have failed to appreciate the moral objection to exploitative behavior that this case displays. Those traditions entertain radically opposed views on how private property should be distributed, but they do not consider the legitimacy of constraints on the exercise of property rights--however they are distributed. The second part of the book demonstrates how this failure clears the way for a recent egalitarian argument, gaining in popularity, for a so-called unconditional basic income. If all have an initial right to an equal share of the resources of the world, then it soon seems to follow that all have a right to an equal share of the value of the resources of the world, which could be cashed in as a labor-free income. That inference is only valid if moral behavior similar to that of the farmer is tolerated. Van Donselaar argues that, ultimately, a confusion about the nature and value of freedom of choice is responsible for the odd conception of private rights in resources that would justify exploitation.

What are the core values of liberalism, and how can they best be promoted? Liberals in the classical tradition championed individual freedom, limited government, and a capitalist economic system with strong rights to private property. Contemporary liberals, in contrast, embrace more egalitarian values and allow for a far more prominent role for government intervention in the market to reduce inequality, redistribute wealth, and regulate economic activity. What accounts for these very disparate liberal views of property rights and economic freedom? How should we understand the transition from the classical view of liberalism to its more egalitarian modern version? And what, ideally, should the relationship be between the central values of liberalism and the economic institutions of capitalism? The eleven essays in this volume address these questions and examine related issues.

Universal basic income is a controversial policy which is causing a stir amongst academics, politicians, journalists and policy-makers all over the world. The idea of receiving " money for nothing " , with no strings attached, has for a long time appeared a crazy or radical proposal. But today, this policy is being put into practice. With more and more trials and experiments taking place in different countries, this book provides both the theory and context for making sense of different basic income approaches, examining how the policy can be best implemented. Unlike many other texts written on this topic, the book provides a balanced account of basic income, weighing up the pros and cons from a number of different positions. The book provides a theory chapter, enabling readers to grasp some of the complex philosophical ideas and concepts which underpin universal basic income, such as social justice, equality and freedom. It also provides an examples chapter, which examines both historical and contemporary basic income studies to have taken place from around the globe. The book also features chapters on the environment and the work of women, as well as an " against " universal basic income chapter, which specifically draws on the criticisms of the policy. This volume is an essential resource for anyone who wishes to get to grips with universal basic income.

This volume includes 22 new pieces by leading political philosophers, on traditional issues (such as authority and equality) and emerging issues (such as race, and money in politics). The pieces are clear and accessible will interest both students and scholars working in philosophy, political science, law, economics, and more.

Fifty of today's finest thinkers were asked to let their imaginations run free to advance new ideas on a wide range of social and political issues. They did so as friends, on the occasion of Philippe Van Parijs's sixtieth birthday.

We are at a point in history where economic inequalities are more widespread each day. The situation of extreme poverty experienced by the majority of the populations in developing countries ("Third World" countries) often coincides with an absence of democracy and the violation of the most fundamental rights. But in so-called "First World" countries a non-negligible proportion of inhabitants also live in impoverished conditions (albeit mainly "relative" poverty) and are denied their rights. The European situation, which this publication aims to analyse, is painful: the entire continent is afflicted by increasing poverty and consequently by the erosion of living conditions and social conflicts. The economic and financial crisis has resulted in the loss of millions of jobs, and created job insecurity for many still working. Economic insecurity raises social tensions, aggravating xenophobia, for instance. Yet the economic and financial crisis could present a good opportunity to rethink the economic and social system as a whole. Indeed, poverty in modern societies has never been purely a question of lack of wealth. It is therefore urgent today to devise a new discourse on poverty. In pursuit of this goal, the Council of Europe is following up this publication in the framework of the project "Human rights of people experiencing poverty", co-financed by the European Commission.

Leading scholars examine the conflicting paradigms of affluence and destitution in the United States—as well as other free societies—and discuss the influence of education, race, and status on economic mobility.

Parasites that manipulate the behaviour of their hosts represent striking examples of adaptation by natural selection. This innovative text provides an up-to-date, authoritative, and challenging review of host manipulation by parasites that assesses the current state of developments in the field and lays out a framework for future research.
