Third graders are encouraged to develop their own points of view about books they read, and to discuss their ideas about a text or characters. Series books are important in 3rd grade, because they allow students to make connections between different books and talk about how certain characters develop. As 3rd graders explore a greater range of books and longer texts, they become more fluent readers and learn to read, define, and pronounce complex words.

"It is often said that education and training are the keys to the future. They are, but a key can be turned in two directions. Turn it one way and you lock resources away, even from those they belong to. Turn it the other way and you release resources and give people back to themselves. To realize our true creative potential—in our organizations, in our schools and in our communities—we need to think differently about ourselves and to act differently towards each other. We must learn to be creative." —Ken Robinson PRAISE FOR OUT OF OUR MINDS "Ken Robinson writes brilliantly about the different ways in which creativity is undervalued and ignored . . . especially in our educational systems." —John Cleese "Out of Our Minds explains why being creative in today's world is a vital necessity. This book is not to be missed." —Ken Blanchard, co-author of The One-minute Manager and The Secret "If ever there was a time when creativity was necessary for the survival and growth of any organization, it is now. This book, more than any other I know, provides important insights on how leaders can evoke and sustain those creative juices." —Warren Bennis, Distinguished Professor of Business, University of Southern California; Thomas S. Murphy Distinguished Research Fellow, Harvard Business School; Best-selling Author, Geeks and Geezers "All corporate leaders should read this book." —Richard Scase, Author and Business Forecaster "This really is a remarkable book. It does for human resources what Rachel Carson's Silent Spring did for the environment." —Wally Olins, Founder, Wolff-olins "Books about creativity are not always creative. Ken Robinson's is a welcome exception" —Mihaly Csikszentmihalyi, c.s. and d.j. Davidson Professor of Psychology, Claremont Graduate University; Director, Quality of Life Research Center; Best-selling Author, Flow "The best analysis I've seen of the disjunction between the kinds of intelligence that we have traditionally honored in schools and the kinds of creativity that we need today in our organizations and our society." —Howard Gardner, a. hobbs professor in cognition and education, Harvard Graduate School of Education, Best-selling Author, Frames of Mind

A collection of twenty-seven traditional Cajun tales, including animal stories, fairy tales, ghost stories, and humorous tales.

Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.
