can deliver best health care at lowest cost through cohesive teams, this book helps us understand the importance and diversity of health care teams

Teamwork is essential to improving the quality of patient care and reducing medical errors and injuries. But how does teamwork really function? And what are the barriers that sometimes prevent smart, well-intentioned people from building and sustaining effective teams? Collaborative Caring takes an unusual approach to the topic of teamwork. Editors Suzanne Gordon, David L. Feldman, MD, and Michael Leonard, MD, have gathered fifty engaging first-person narratives provided by people from various health care professions. Each story vividly portrays a different dimension of teamwork, capturing the complexity—and sometimes messiness—of moving from theory to practice when it comes to creating genuine teams in health care. The stories help us understand what it means to be a team leader and an assertive team member. They vividly depict how patients are left out of or included on the team and what it means to bring teamwork training into a particular workplace. Exploring issues like psychological safety, patient advocacy, barriers to teamwork, and the kinds of institutional and organizational efforts that remove such barriers, the health care professionals who speak in this book ultimately have one consistent message: teamwork makes patient care safer and health care careers more satisfying. These stories are an invaluable tool for those moving toward genuine interprofessional and intraprofessional teamwork.

For fifty years, health care teams have been a misunderstood, undervalued, and neglected part of health care. Yet, as Drinka and Clark make clear, well functioning interdisciplinary

health care teams (IHCTs) have the potential to help the health care system face its demons—financial constraints and comprehensive error-free care. Because of misunderstandings, administrators, funders, and policy makers keep the potential for interdisciplinary teams hidden. Health care educators teach versions of teamwork that are inadequate and clinicians cling to autonomous modes of practice. IHCTs have characteristics and problems that are unique to health care settings and the health providers who work in them. Drinka and Clark present a groundbreaking attempt to develop a comprehensive framework for IHCTs. They intend to empower clinicians who work on teams and educators who teach teamwork to impart the basic essentials of effective interdisciplinary teamwork in the health professions. Until now, much of the thinking about IHCTs has been drawn from the research and practice literature from other fields, such as business and group dynamics, which may be of only limited relevance to health care settings. Drinka and Clark present new ways of thinking about team development and maintenance, leadership, conflict, the science and art of practice, communication, and team members as teachers and learners. Anyone who is currently working in health care or is considering a career in health care should read this book.

**PROMOTING PARTNERSHIP FOR HEALTH** This book forms part of a series entitled Promoting Partnership for Health published in association with the UK Centre for the Advancement of Interprofessional Education (CAIPE). The series explores partnership for health from policy, practice and educational perspectives. Whilst strongly advocating the imperative driving collaboration in healthcare, it adopts a pragmatic approach. Far from accepting established ideas and approaches, the series alerts readers to the pitfalls and ways

to avoid them. **DESCRIPTION** Interprofessional Teamwork for Health and Social Care is an invaluable guide for clinicians, academics, managers and policymakers who need to understand, implement and evaluate interprofessional teamwork. It will give them a fuller understanding of how teams function, of the issues relating to the evaluation of teamwork, and of approaches to creating and implementing interventions (e.g. team training, quality improvement initiatives) within health and social care settings. It will also raise awareness of the wide range of theories that can inform interprofessional teamwork. The book is divided into nine chapters. The first 'sets the scene' by outlining some common issues which underpin interprofessional teamwork, while the second discusses current teamwork developments around the globe. Chapter 3 explores a range of team concepts, and Chapter 4 offers a new framework for understanding interprofessional teamwork. The next three chapters discuss how a range of range of social science theories, interventions and evaluation approaches can be employed to advance this field. Chapter 8 presents a synthesis of research into teams the authors have undertaken in Canada, South Africa and the UK, while the final chapter draws together key threads and offers ideas for future of teamwork. The book also provides a range of resources for designing, implementing and evaluating interprofessional teamwork activities.

Both comprehensive and accessible, this is an ideal resource for anyone who plans to teach or practice integrated, cost-effective healthcare in the 21st century. □ Explores the complexities of interprofessional teamwork and education, addressing both practice and teaching □ Discusses how patients are affected by healthcare providers who do not function as a cohesive team and looks at the patient's role in teamwork □ Offers a detailed model of interprofessional teamwork

based on the authors' experience with a long-term, well-functioning interprofessional healthcare team □ Uses illustrative narratives and case studies to provide examples of the concepts and principles presented □ Includes a chapter based on interviews with patients and their caregivers to highlight experiences with functional and dysfunctional teams □ Presents new topics, such as critical areas of practice (primary care, long-term care, and transitions of care); ethical issues in teamwork; educational theory; the use of narrative; and challenges in sustaining interprofessional education

This new, Second Edition of *The Interprofessional Health Care Team: Leadership and Development* provides the much-needed knowledge base for developing a relational leadership style that promotes interdisciplinarity, interprofessionalism, and productive teamwork. It describes possibilities and options, theories, exercises, rich references, and stimulating questions that will inspire both novices and experts to think differently about their roles and styles as leaders or members of a team.

The provision of care within the context of the modern health service environment involves a wide range of professionals. The health care team might include general practitioners, nurses, midwives, hospital doctors, physiotherapists, other allied health professionals, as well as receptionists and practice managers. To optimise delivery of care at both individual and population levels, team members must work collaboratively with colleagues in their own profession and others. This book, in the *Values-Based Medicine* series, adds the dimension of values to the more usual discussions of teamwork, considering interactions between health

care professionals and how these might be affected by differences in professional and personal values. Examples of scenarios based on real-life experience promote learning and reflection. Anybody working or training in health care and who aspires to collaborate successfully with their colleagues in other specialties will find this book extremely valuable, as will educators who facilitate learners in teamwork.

The U.S. healthcare system is now spending many millions of dollars to improve "patient safety" and "inter-professional practice." Nevertheless, an estimated 100,000 patients still succumb to preventable medical errors or infections every year. How can health care providers reduce the terrible financial and human toll of medical errors and injuries that harm rather than heal? *Beyond the Checklist* argues that lives could be saved and patient care enhanced by adapting the relevant lessons of aviation safety and teamwork. In response to a series of human-error caused crashes, the airline industry developed the system of job training and information sharing known as Crew Resource Management (CRM). Under the new industry-wide system of CRM, pilots, flight attendants, and ground crews now communicate and cooperate in ways that have greatly reduced the hazards of commercial air travel. The coauthors of this book sought out the aviation professionals who made this transformation possible. *Beyond the Checklist* gives us an inside look at CRM training and shows how airline staff interaction that once suffered from the same dysfunction that too often undermines real teamwork in health care today has dramatically improved. Drawing on the experience of doctors, nurses, medical educators, and administrators, this book demonstrates how CRM can be adapted, more widely and effectively, to health care delivery. The authors provide case

studies of three institutions that have successfully incorporated CRM-like principles into the fabric of their clinical culture by embracing practices that promote common patient safety knowledge and skills. They infuse this study with their own diverse experience and collaborative spirit: Patrick Mendenhall is a commercial airline pilot who teaches CRM; Suzanne Gordon is a nationally known health care journalist, training consultant, and speaker on issues related to nursing; and Bonnie Blair O'Connor is an ethnographer and medical educator who has spent more than two decades observing medical training and teamwork from the inside.

"This book explores the complex relationships between patients, physicians, and nurses with different cultural backgrounds, integrating theoretical and empirical perspectives on medical teamwork"--
