Home to an estimated 15.9% of the world's proven oil reserves, Saudi Arabia is the single largest economy in the Middle East and North Africa. According to the Ministry of Finance, real GDP grew by 3.8% to \$746bn in 2013. While oil income is expected to continue to account for the majority of government revenues for the foreseeable future, the non-oil sector has expanded significantly in recent decades growing 9.3% in 2013. Indeed, while some Western countries may be seeing a return to cautious optimism and leading emerging economies are weighing the potential impact on capital flows of tapering in the US Federal Reserve's quantitative easing programme, Saudi Arabia is seeing sustained growth buoyed by high global oil prices and internal investment in its own infrastructure. Some 15 years after Saudi Arabia attended the inaugural meeting of G20 countries, its key economic indicators make it the envy of many other member states. Given the size of Saudi economy within the regional and indeed global market, OBG looks in depth at bilateral trade between ASEAN nations and the GCC.

This is the first full account of how an influential form of commercial organization - the multinational enterprise - drove globalization and contributed to the making of the modern world. Robert Fitzgerald explores the major role of multinational enterprises in the events of world history, from the nineteenth century to the present, revealing how the growth of businesses that operated across borders contributed to an unprecedented worldwide transformation and deepening interdependence between countries. He demonstrates how international businesses shaped the economic development and competitiveness of nations, their politics and sovereignty, and the balance of power in international relations. The Rise of the Global Company uses the lessons of history to question prominent contemporary interpretations of multinationals and their consequences, and offers a truly wide-ranging survey of multinational enterprise, spanning two hundred years and five continents.

This book provides a unique historical and qualitative review of ten foreign automakers with plants in developed North America from their early beginnings to their export entry into North America. It seeks to expand the knowledge of American and Canadian policymakers pursuing a new foreign motor vehicle assembly plant or Foreign Direct Investment.

The transport industry has an important role to play in addressing climate change and the environmental challenges facing governments, businesses and individuals. Achieving net zero emissions by 2050 will require this sector, which is a large contributor of emissions, to innovate, adapt and drive positive change. New technologies including batteries and alternative fuels will all be significant, as will developing different approaches and outlooks. The Road to Zero Emissions is the comprehensive guide for those in the transport industry to understanding what can and is being done to tackle climate change. Through examining established companies and new entrants in the automotive space, readers are provided with examples of the importance of infrastructure, business innovation and financing for the future. In addition to this, the role of governments in establishing policies, such as zero-emission zones, is also discussed. Progressing towards zero emissions requires immediate change and this book will start you on the journey.

The automotive industry is still one of the world's largest manufacturing sectors, but it suffers from being very technology-focused as well as being relatively short-term focused. There is little emphasis within the industry and its consultancy and analyst supply network on the broader social and economic impacts of automobility and of the sector that provides it. The Global Automotive Industry addresses this need and is a first port of call for any academic, official or consultant wanting an overview of the state of the industry. An international team of specialist researchers, both from academia and business, review and analyse the key issues that make vehicle manufacturing still the world's premier manufacturing sector, closely tied in with the fortunes of both established and newly emerging economies. In doing so, it covers issues related to manufacturing, both established practices as well as new developments; issues relating to distribution, marketing and retail, vehicle technologies and regulatory trends; and, crucially, labour practices and the people who build cars. In all this it explains both how the current situation arose and also likely future trajectories both in terms of social and regulatory trends, as the technological, marketing and labour practice responses to those, leading in many cases to the development of new business models. Key features Provides a global overview of the automotive industry, covering its current state and considering future challenges Contains contributions from international specialists in the automotive sector Presents current research and sets this in an historical and broader industry context Covers threats to the industry, including globalization, economic and environmental sustainability The Global Automotive Industry is a must-have reference for researchers and practitioners in the automotive industry and is an excellent source of information for business schools, governments, and graduate and undergraduate students in automotive engineering.
