This chapter deals with alkaline-earth metals (Mg, Ca, Sr, Ba) and their ferroalloys technology. The chapter provides an overview of these metals, their properties, and their reactions with other elements, and it outlines major relevant phase equilibria diagrams. Oxide systems equilibria are also considered. Different raw materials and methods for producing alkaline-earth ferroalloys and master alloys are presented. Specific details of the technology for smelting are described depending on the alloy type and grade. Additionally, the theory and technology used to produce calcium carbide and oxide (metallurgical

lime) are described.
