This book has received very good response from students and teachers within the country and abroad alike. Its previous edition exhausted in a very short

time. I place on record my sense of gratitude to the students and teachers for their appreciation of my work, which has offered me an opportunity to bring out this revised Eighteenth Edition. Due to the demand of students a chapter on Linear Programming has been added. A large number of new examples and problems selected from the latest question papers of various engineering examinations held recently have been included to enable the students to understand the latest trend.

"Advanced Engineering Mathematics" is written for the students of all engineering disciplines. Topics such as Partial Differentiation, Differential Equations, Complex Numbers, Statistics, Probability, Fuzzy Sets and Linear Programming which are an important part of all major universities have been well-explained. Filled with examples and in-text exercises, the book successfully helps the student to practice and retain the understanding of otherwise difficult concepts.

Keeping in view the limited time at the disposal of engineering students preparing for university examination, the book contains a fairly large number of solved examples taken from various recent examination papers of different universities and Engineering colleges so that they may not find any difficulty while answering these problems in their final examination. Latest question papers up to summer 2006 of A.M.I.E. have been added for the readers to understand the latest trend.

For Engineering students & also useful for competitive Examination.

Advanced Engineering Mathematics is a good reference on the practical mathematics used in engineering. The book has been designed to provide engineers with quick-access mathematical formulas for their specialities. It contains advanced topics such as Laplace transform and numerical methods. Simple and extensive treatment has been given to the topics involved. The book covers the foundation of Modern Mathematics which is being used by almost all the branches of engineering. More than 400 solved problems on all topics of the contents (employing different techniques in the solution) have been given.

For B.E./B.Tech. / B.Arch. Students for First Semester of all Engineering Colleges of Maha Maya Technical University, Noida and Gautam Buddha Technical University, Lucknow

Now in its eighth edition, Higher Engineering Mathematics has helped thousands of students succeed in their exams. Theory is kept to a minimum, with the emphasis firmly placed on problem-solving skills, making this a thoroughly practical introduction to the advanced engineering mathematics that students need to master. The extensive and thorough topic coverage makes this an ideal text for upper-level vocational courses and for undergraduate degree courses. It is also supported by a fully updated companion website with resources for both students and lecturers. It has full solutions to all 2,000 further questions contained in the 277 practice exercises.

This book is primarily written according to the latest syllabus (July 2013) of Mahamaya Technical University, Noida for the third semester students of B.E./B.Tech/B.Arch. The textbook is for the Group B [ME, AE, MT, TT, TE, TC, FT, CE, CH, etc. Branches] of B.Tech III Semester. The Solved Question Paper of Dec. 2012 is included in the body of the text.
