Apelio 357 Laser Punch

This AMADA APELIO III-357V
Laser Punch Combination
Machine from 1997 has a
record of 72000 production
hours. Operated through a
FANUC 16-L with RS232
Interface Control unit, the
model stands out for its
ability to operate on metal
sheets of up to 6mm in
thickness.

APELIO II - Specifications - AMADA GmbH

The APELIO punch-laser machine incorporates the unique intelligent hydraulic ram system PHNC. This system ensures that the optimum ram cycle is used for punching, forming, nibbling, slitting and marking. A dual flow hydraulic ram provides hit rates in excess of 1000 HPM while still delivering a full 20 tonne punching force

In the 1950's, the design and implementation of the Toyota Production System (TPS) within Toyota had begun. In the 1960's, Group Technology (GT) and Cellular Manufacturing (CM) were used by Serck Audco Valves, a high-mix low-volume (HMLV) manufacturer in the United Kingdom, to guide enterprise-wide transformation. In 1996, the publication of the book *Lean Thinking* introduced the entire world to Lean. Job Shop Lean integrates Lean with GT and CM by using the five Principles of Lean to guide its implementation: (1) identify value, (2) map the

Online Library Amada Apelio 357 Laser Punch

Manual File Type
value stream, (3) create flow, (4) establish pull, and (5) seek perfection. Unfortunately, the tools typically used to implement the Principles of Lean are incapable of solving the three Industrial Engineering problems that HMLV manufacturers face when implementing Lean: (1) finding the product families in a product mix with hundreds of different products, (2) designing a flexible factory layout that "fits" hundreds of different product routings, and (3) scheduling a multi-product multi-machine production system subject to finite capacity constraints. Based
