The papers are organized in the following topical sections: Monte Carlo and quasi-Monte Carlo methods; metaheuristics for optimization problems; advanced numerical methods for scientific computing; advanced numerical techniques for PDEs and applications; solving large engineering and scientific problems with advanced mathematical models; numerical simulations and back analysis in civil and mechanical engineering.

The author examines the factors which influence terrorists' target selection. In particular he looks at the influence of the ideologies, strategies and tactics of terrorist groups, and describes how these are restricted by the terrorists' resources, by protective and anti-terrorist measures, by the society within which the terrorists operate, and by the nature of the terrorists and their supporters. He concludes that terrorists' target selection is often both explicable and

This is a "How-To" book which explains, with hands-on examples, how to design and implement a SuperSpeed USB peripheral that can interface to your hardware using a 32-bit 100MHz bus with standard or custom protocols. The book is based on the Cypress FX3 SuperSpeed Device and the firmware examples are written around a low-cost SuperSpeed Explorer board and a companion CPLD board which are available from www.cypress.com/fx3book. The software examples are written for the Windows operating system and the CPLD examples are written in Verilog. The source code for all of the examples is downloadable from the book web site. If you currently think that SuperSpeed USB design is only for the elite then look inside this book and discover that SuperSpeed technology has now been made accessible to the rest of us!

China ' s relation to Taiwan has been in constant contention since the founding of the People ' s Republic of China in October 1949 and the creation of the defeated Kuomintang (KMT) exile regime on the island two months later. The island ' s autonomous sovereignty has continually been challenged, initially because of the KMT ' s insistence that it continue to represent not just Taiwan but all of China—and later because Taiwan refused to cede sovereignty to the then-dominant power that had arisen on the other side of the Taiwan Strait. One thing that makes Taiwan so politically difficult and yet so intellectually fascinating is that it is not merely a security problem, but a ganglion of interrelated puzzles. The optimistic hope of the Ma Ying-jeou administration for a new era of peace and cooperation foundered on a landslide victory by the Democratic Progressive Party, which has made clear its intent to distance Taiwan from China ' s political embrace. The Taiwanese are now waiting with bated breath as the relationship tautens. Why did détente fail, and what chance does Taiwan have without it? Contributors to this volume focus on three aspects of the evolving quandary: nationalistic identity, social economy, and political strategy.
