The Best Tool of the Millennium The seeds of Rybczynski's elegant and illuminating new book were sown by The New York Times, whose editors asked him to write an essay identifying "the best tool of the millennium." The award-winning author of Home, A Clearing in the Distance, and Now I Sit Me Down, Rybczynski once built a house using only hand tools. His intimate knowledge of the toolbox -- both its contents and its history -- serves him beautifully on his quest. One Good Turn is a story starring Archimedes, who invented the water screw and introduced the helix, and Leonardo, who sketched a machine for carving wood screws. It is a story of mechanical discovery and genius that takes readers from ancient Greece to car design in the age of American industry. Rybczynski writes an ode to the screw, without which there would be no telescope, no microscope -- in short, no enlightenment science. One of our finest cultural and architectural historians, Rybczynski renders a graceful, original, and engaging portrait of the tool that changed the course of civilization.

The Student Solutions Manual contains worked-out solutions to many of the problems. It also illustrates the calls required for the programs using the algorithms in the text, which is especially useful for those with limited programming experience.

This volume covers current research findings and engineering applications of X-ray methods by the Japanese X-ray group members. The first part of the volume deals with fundamental problems in the methods for X-ray stress measurement. Phase stresses in the constituent phases of ceramic composites and ceramic-fiber reinforced metal-matrix composites are separately measured by X-rays, while three-dimensional stresses and thermal stresses in composites measured by X-rays are compared with the theoretical and numerical analyses. This work will therefore provide significant information for designing high-performance composites. Other topics covered include synchrotron X-ray radiation and the analysis of X-ray data by the Gaussian curve method. Part two is devoted to the application of X-ray diffraction methods for various engineering purposes, the residual stress and half-value breadth (the full width at half the maximum) of the diffraction profiles being the two main X-ray parameters utilized in those applications. Chapters are included on X-ray fractography, a powerful technique for failure analysis, which is applied to the brittle fracture of ceramics and to the fatigue fracture of steels under various service conditions.

A delightful compendium of writings that perfectly express the wit and wisdom of Stephen Fry. A hilarious collection of the many articles written by Stephen Fry for magazines, newspapers and radio. It includes selected wireless essays of Donald Trefusis, the ageing professor of philology brought to life in Fry's novel The Liar, and the best of Fry's weekly column for the Daily Telegraph. Perfect to dip into but just as enjoyable to read cover to cover, this book, perhaps more than any other, shows the breadth of Fry's interests and the depth of his insight. He remains a hilarious writer on whatever topic he puts his mind to.

On the eve of their Silver Anniversary, Mary Gooch is waiting for her husband Jimmy -- still every inch the handsome star athlete he was in high school -- to come home. As night turns to day, it becomes frighteningly clear to Mary that he is gone. Through the years, disappointment and worry have brought Mary's life to a standstill, and she has let her universe shrink to the well-worn path from the bedroom to the refrigerator. But her husband's disappearance startles her out of her inertia, and she begins a desperate search. For the first time in her life, she boards a plane and flies across the country to find her lost husband. So used to hiding from the world, Mary finds that in the bright sun and broad vistas of California, she is forced to look up from the pavement. And what she finds fills her with inner strength she's never felt before. Through it all, Mary not only finds kindred spirits, but reunites with a more intimate stranger no longer sequestered by fear and habit: herself.

A woman who dreams of machines. A paper lantern that falls in love. The most compelling video game you've never played and that nobody can ever play twice. This collection of Catherynne M. Valente's stories and poems with Japanese themes includes the lauded novella "Silently and Very Fast," the award-nominated "Thirteen Ways of Looking at Space/Time," and "Ghosts of Gunkanjima"--which originally appeared in a book smaller than your palm, published in a limited edition of twenty-four. Also included are two new stories: the semiautobiographical, metafictional, and utterly magical "Ink, Water, Milk" and the cinematic, demon-haunted "Story No. 6." -- VIZ Media
