This revised 3rd edition has been reformatted for easier reference and access to information. The new edition reflects the latest technologies and care modalities essential to an adult critical care nursing practice. The text uses the nursing process as a framework for each skill presented, and should work well for staff development personnel as it can be easily integrated into critical care orientation programs. Each chapter includes behavioural objectives, key terms, general assessment guidelines and a detailed reference/bibliography listing. Consistent with JCAHO's new emphasis on continuous quality improvement, this manual sets the standard against which all critical care procedures will be judged.

The leading resource for collaborative critical care for newborns, Merenstein & Gardner 's Handbook of Neonatal Intensive Care, 7th Edition provides a multidisciplinary approach and a real-world perspective. It focuses on evidenced-based practice, with clinical directions in color for easy retrieval and review. Special features help you prioritize the steps in initial care, and provide a guide to sharing information with parents. With each chapter written jointly by both physicians and nurses, this book is comprehensive enough to suit the needs of the entire team in your neonatal intensive care unit. Unique! A multidisciplinary perspective is provided by an editorial team of two physicians and two nurses, and each chapter is written and reviewed by a physician and nurse team, so information mirrors the real-world experience in a neonatal intensive care unit. Unique! Clinical content is in color, so you can quickly scan through chapters for information that directly affects patient care. Unique! Parent Teaching boxes highlight the relevant information to be shared with a patient ' s caregivers. Critical Findings boxes outline symptoms and diagnostic findings that require immediate attention, helping you prioritize assessment data and steps in initial care. Coverage in clinical chapters includes pathophysiology and etiology, prevention, data collection, treatment, complications, outcomes, prognosis, and parent education. Expanded Neonatal Surgery chapter covers all of the most common procedures in neonatal surgery. Follow-up of the Neonatal Intensive Care Unit Infant chapter is expanded to include coverage of outcomes management and discharge planning. Streamlined references are updated to include only the most current or classic sources.

Worldwide more than one million babies die annually from perinatal asphyxia and its associated complications such as neonatal encephalopathy – one of the major causes of cerebral palsy and cognitive deficiencies in children aside from prematurity. Cooling the head – or the entire body – minimizes neuronal death, enabling the neonatal brain to be 'rescued' thus greatly improving developmental outcomes. Hypothermic neural rescue therapy has revolutionized the treatment of this condition and is a major recent achievement in neonatal medicine. This landmark book provides a brief scientific underpinning of hypothermic neural rescue therapy and lays out the evidence base for good practice. Internationally recognized authorities give practical advice, drawn from personal experience, on how to deliver hypothermia in the neonatal intensive care unit. A valuable addition to any neonatal unit, this is essential reading for neonatologists, neonatal nurses and paediatric neurologists.

88 short papers originating from the 12th International Symposium on Intracranial Pressure and Brain Monitoring held in August 2004 in Hong Kong present experimental as well as clinical research data on invasive and non-invasive intracranial pressure and brain biochemistry monitoring. The papers have undergone a peer-reviewing and are organized in nine sections: ICP management in head injury, neurochemical monitoring, intracranial hypertension, neuroimaging, hydrocephalus, clinical trails, experimental studies, brain compliance and biophysics.
