The application of proper ethical systems and education programs is a vital concern in the medical industry. When healthcare professionals are held to the highest moral and training standards, patient care is improved. Healthcare Ethics and Training: Concepts, Methodologies, Tools, and Applications is a comprehensive source of academic research material on methods and techniques for implementing ethical standards and effective education initiatives in clinical settings. Highlighting pivotal perspectives on topics such as e-health, organizational behavior, and patient rights, this multi-volume work is ideally designed for practitioners, upper-level students, professionals, researchers, and academics interested in the latest developments within the healthcare industry.

Although informatics trainees and practitioners who assume operational computing roles in their organization may have reasonably advanced understanding of theoretical informatics, many are unfamiliar with the practical topics - such as downtime procedures, interface engines, user support, JCAHO compliance, and budgets - which will become the mainstay of their working lives. Practical Guide to Clinical Computing Systems 2nd edition helps prepare these individuals for the electronic age of health care delivery. It is also designed for those who migrate into clinical computing operations roles from within their health care organization. A new group of people interested in this book are those preparing for Clinical Informatics board certification in the US. The work provides particular differentiation from the popular first edition in four areas: 40% more content detailing the many practical aspects of clinical informatics. Addresses the specific needs of the Clinical Informatics board certification course ! for which it is presently recommended by the ABPM Focus on new tech paradigms including cloud computing and concurrency ! for this rapidly changing field. Focuses on the practical aspects of operating clinical computing systems in medical centers rather than abstruse theory. Provides deepened and broadened authorship with a global panel of contributors providing new wisdom and new perspectives - reflecting inclusion of the first edition on the clinical informatics study guide materials. Presents a practical treatment of workday but often unfamiliar issues ! downtime procedures, interface engines, user support, JCAHO compliance, and budgets.

Introduction to Health Informatics is the first book to examine health informatics within the Canadian healthcare environment. Presenting concepts and applications of health informatics in a clear and structured way, the author considers key foundational topics including computers and networks, databases and information systems, system analysis and design, and usability. After introducing students to the building blocks of the field, Christo El Morr explores information systems in hospitals, telemedicine, consumer health informatics, public health informatics, and electronic health records. The text wraps up with a discussion of privacy, confidentiality, security challenges, and emerging trends such as big data analytics, gamification, and wearable devices. The chapters present a wealth of learning tools, including key terms, questions that test the reader's understanding, reflective activities, and practical assignments that make use of free software. Shedding light on current issues and the intricacies involved in health informatics in Canada, each chapter provides examples of provincial and territorial projects and features an interview with a health informatics professional about real-life applications. Identifying how information technologies influence and affect a range of Canadian healthcare stakeholders, this comprehensive overview is an invaluable read for students in the health informatics, health management, health policy, and global health fields.

Building Core Competencies in Pharmacy Informatics is designed to provide student pharmacists with the knowledge and competencies required to use informatics in the practice of pharmacy. The organization helps conceptualize and identify technologies as employed in the medication use processes. The book addresses the following informatics competencies required of PharmD graduates: Store, retrieve, and analyze health information. Optimize the medication prescribing and ordering process. Aid in clinical decision making. Automate the medication delivery processes. Facilitate pharmacy management.

Despite all the jokes about the poor quality of physician handwriting, physician adoption of computerized provider order entry (CPOE) in hospitals still lags behind other industries! use of technology. As of the end of 2010, less than 22% of hospitals had deployed CPOE. Yet experts claim that this technology reduces over 80% of medication errors and could prevent an estimated 522,000 serious medication errors annually in the US. Even though the federal government has offered \$20 billion dollars in incentives to hospitals and health systems through the 2009 stimulus (the ARRA HITECH section of the American Recovery and Reinvestment Act of 2009), many organizations are struggling to implement advanced clinical information systems including CPOE. In addition, industry experts estimate that the healthcare industry is lacking as many as 40,000 persons with expertise in clinical informatics necessary to make it all happen by the 2016 deadline for these incentives. While the scientific literature contains numerous studies and stories about CPOE, no one has written a comprehensive, practical guide like Making CPOE Work. While early adopters of CPOE were mainly academic hospitals, community hospitals are now proceeding with CPOE projects and need a comprehensive guide. Making CPOE Work is a book that will provide a concise guide to help both new and experienced health informatics teams successfully plan and implement CPOE. The book, in a narrative style, draws on the author's decade-long experiences of implementing CPOE at a variety of academic, pediatric and community hospitals across the United States.

A step-by-step, integrated approach for successful, FDA-approved combination drug products Using a proven integrated approach to combination drug development, this book guides you step by step through all the preclinical, clinical, and manufacturing stages. Written from an FDA regulatory perspective, the book not only enables you to bring a successful combination drug product to market, it also sets forth the most efficient and effective path to FDA approval. The book begins with an introductory chapter presenting definitions and basic regulatory principles of combination products. Next, it reviews manufacturing and controls, preclinical testing models, pharmacology, clinical testing, regulatory submissions, FDA reviews, and approvals. Among the key topics examined are: * The pharmacology, safety pharmacology, and toxicology supporting human clinical trials of combination products * Approaches to clinical trial protocol design and execution * Chemical, physicochemical, and analytical aspects of manufacturing controls and validation that lead to stable components for combination products * Key sponsor/FDA meetings and negotiations essential for approval and commercialization Case studies involving such actual combination products as Mylotarg, Herceptin, and Herceptin help you better understand how to implement the author's practical guidelines. References at the end of each chapter enable you to find more information on any stage of the development, manufacturing and approval processes. This book is ideal for researchers, regulators, academics, project managers, and executives involved in the complex process of combination product development. Not only does it offer a comprehensive guide to the technical aspects of the field, it also integrates all of these technical aspects into a unified, effective approach to help ensure a successful, approved product.

The information technology revolution has fueled the demand in hospitals and health systems for accomplished experts who can help select, implement and maintain CPOE, BCMA, EHR and other systems. As the use of IT in healthcare expands and the complexity of medication therapy increases, there has been a correspondingly rapid growth in the practice of pharmacy informatics and a basic need for an understanding of key elements.The Pharmacy Informatics Primer provides a foundational understanding and offers (pearls of wisdom) for pharmacy professionals involved in informatics. This introductory resource outlines key concepts in understanding, developing, implementing, and maintaining clinical information and automation systems.This essential guide is designed for all pharmacists and covers an introduction to major concepts of informatics such as ePrescribing, CPOE, bar-coding, smart pumps, and the pharmacist's role in EHR. Chapter features include key terms and definitions, and a comprehensive table of pearls, specific to each subject to present a clear understanding of all concepts.

Contains papers which reflect the breadth and depth of the field of biomedical and health informatics, covering topics such as; health information systems, education, standards, consumer health and human factors, emerging technologies, sustainability, organizational and economic issues, genomics, and image and signal processing.

In an effort to combat human error in the medical field, medical professionals continue to seek the best practices and technology applications for the diagnosis, treatment, and overall care of their patients. Improving Health Management through Clinical Decision Support Systems brings together a series of chapters focused on the technology, funding, and future plans for improved organization and decision-making through medical informatics. Featuring timely, research-based chapters on topics including, but not limited to, data management, information security, and the benefits of technology-based medicine, this publication is an essential reference source for clinicians, scientists, health economists, policymakers, academicians, researchers, advanced level students, and government officials interested in health information technology.
