Chemistry: An Atoms-Focused Approach (2nd ed.) by Thomas R. Gilbert. The Second Edition's new co-author, Stacey Lowery Bretz, uses visualization tools—based on Chemistry Education Research, and focused on the particulate nature of matter—to help students self-assess what they know before, during, and after each chapter.

Fully aligned to the latest College Board 's curriculum framework, Chemistry: An Atoms-Focused Approach helps students understand chemistry at the micro, macro, and symbolic level. Author and chemistry education researcher, Stacey Lowery Bretz has incorporated her research on how students construct and interpret multiple representations into clear visualization pedagogy, which emphasizes the particulate nature of matter and helps students become expert problem solvers.

The authors, who have more than two decades of combined experience teaching an atoms-first course, have gone beyond reorganizing the topics. They emphasize the particulate nature of matter throughout the book in the text, art, and problems, while placing the chemistry in a biological, environmental, or geological context. The authors use a consistent problem-solving model and provide students with ample opportunities to practice.

A research-based, atoms-focused text and assessment package that helps students visualize chemistry as they solve problems.

Download File PDF Chemistry Atoms Focused Approach Gilbert Thomas

All general chemistry students face similar challenges but they use their textbook to meet those challenges in different ways. Some read chapters from beginning to end, some consult the book as a reference, and some look to the book for problem-solving help. Chemistry: The Science in Context, Third Edition was written and designed to help every kind of student, regardless of how they use the book.

"A research-based, atoms-focused text and assessment package that helps students visualize chemistry as they solve problems. The exciting NEW Third Edition expands on the visualization pedagogy from coauthor Stacey Lowery Bretz and makes it even easier to implement in

Download File PDF Chemistry Atoms Focused

the classroom. Based on her chemistry education research on how students construct and interpret multiple representations, art in the book and media has been revised to be more pedagogically effective and to address student misconceptions. NEW projected visualization questions help instructors assess students' conceptual understanding in lecture or during exams. A NEW Interactive Instructor's Guide provides innovative ways to incorporate research-based active learning pedagogy into the classroom"--

Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills through the process of becoming independent problem-solvers. They help students

learn to think like a chemists so they can apply the problem solving process to all aspects of their lives. In CHEMISTRY: AN ATOMS FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students

to use the tools of critical thinkers: to

ask questions, to apply rules and models and to evaluate outcomes.

Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

A History of Science in Society is a concise overview that introduces complex ideas in a non-technical fashion. Andrew Ede and Lesley B. Cormack trace the history of science through its continually changing place in society and explore the link between the pursuit of knowledge and the desire to make that knowledge useful. In this edition, the authors examine the robust intellectual exchange between East and West and provide new discussions of two women in science:

Chemistry Atoms Focused

Approach Gilbert Maria Winkelmann.

A chapter on the relationship between science and war has been added as well as a section on climate change. The further readings section has been updated to reflect recent contributions to the field. Other new features include timelines at the end of each chapter, 70 upgraded illustrations, and new maps of Renaissance Europe, Captain James Cook's voyages, the 2nd voyage of the Beagle, and the main war front during World War I.

Chemistry seeks to provide qualitative and quantitative explanations for the observed behaviour of elements and their compounds. Doing so involves making use of three types of representation: the macro (the

Download File PDF Chemistry Atoms Focused

Empirical properties of substances); the sub-micro (the natures of the entities giving rise to those properties); and the symbolic (the number of entities involved in any changes that take place). Although understanding this triplet relationship is a key aspect of chemical education, there is considerable evidence that students find great difficulty in achieving mastery of the ideas involved. In bringing together the work of leading chemistry educators who are researching the triplet relationship at the secondary and university levels, the book discusses the learning involved, the problems that students encounter, and successful approaches to teaching. Based on the reported research, the editors argue for a coherent model for understanding

Download File PDF Chemistry Atoms Focused

the triplet relationship in chemical education.

Not just Atoms-First, Atoms-Focused. An atoms-first text and media program that goes beyond a reorganization of topics, emphasizes the particulate nature of matter throughout the book, art, and problems, and helps students develop their molecular visualization skills as they learn to become expert problem-solvers.
