Complementary and Alternative Veterinary Medicine Considered is a book that belongs in your veterinary library. If you are a veterinarian wondering if you should incorporate complementary and alternative veterinary medicine (CAVM) into your practice, if you have recently hired an associate eager to try such things as acupuncture or homeopathy, or if you have clients asking you about chiropractic, herbal, or magnetic field therapy for their pets, you'll want to understand the history, science and ethics behind such therapies. In its 2001 Guidelines for Complementary and Alternative Medicine, the American Veterinary Medical Association (AVMA) recognizes the growing interest in CAVM, and encourages the critical examination of these therapies using the scientific method. Following the AVMA's lead on this subject, Complementary and Alternative Veterinary Medicine Considered thoroughly examines a variety of CAVM therapies and asks important questions regarding alternative treatments. For example, is acupuncture effective in pain relief? What is homeopathy? What is the history behind chiropractic? What does the research say (and not say) about various CAVM modalities? And, just as importantly, what are the ethical and regulatory considerations concerning such therapies? This book has the answers to those questions and more. Complementary and Alternative Veterinary Medicine Considered will help practicing veterinarians to make informed decisions about specific CAVM therapies. This text evaluates various prevalent therapies, and will give veterinarians the ethical and scientific bases they need to make sound decisions regarding CAVM therapies Coverage includes but is not limited to: Acupuncture and acupressure; Energy medicine; Manual therapy (chiropractic); Manual therapy (massage); Magnetic and electromagnetic therapy; Laser and light therapy; Homeopathy; and Herbal therapy.

This book provides readers with an introduction to unconventional modes of therapy, including practitioners' perspectives on specific therapies. It is divided into 9 sections: history, and underlying principles of alternative medicine, nutrition, physical medicine, energetic medicine, botanical medicine, homeopathy, miscellaneous therapies, integration into veterinary practice, and complementary and alternative perspectives. Some of the many topics covered are nutritional therapy, acupuncture, chiropractic, massage therapy, physical therapy, kinesiology, laser therapy, magnetic field therapy, bioenergetic medicine, herbal therapy, ayurvedic medicine, and homeopathy. The appendixes include resources, including suppliers, web sites, recommended texts and periodicals, organizations, databases, and diagnostic software.

Integrating complementary treatment options with traditional veterinary practice is a growing trend in veterinary medicine. Veterinarians and clients alike have an interest in expanding treatment options to include alternative approaches such as Western and Chinese Herbal Medicine, Acupuncture, Nano-Pharmacology, Homotoxicology, and Therapeutic Nutrition along with conventional medicine. Integrating Complementary Medicine into Veterinary Practice introduces and familiarizes veterinarians with the terminology and procedures of these complementary treatment modalities in a traditional clinical format that facilitates the easy integration of these methods into established veterinary practices.

Complementary Medicine for Veterinary Technicians and Nurses is the first resource on holistic veterinary care written specifically for the veterinary technician. Organized by treatment modality, the book offers practical information designed to help readers develop an understanding of each modality, assist with procedures associated with holistic medicine, and knowledgeably discuss treatment options with clients. Outlining the respective roles of technicians and veterinarians

throughout, this book is a welcome reference for readers looking to expand their knowledge of complementary veterinary medicine and introduce additional treatment options in their practice.

"No Way to Treat a Friend" is an informative and readable exposé of Complementary and Alternative Veterinary Medicine (CAVM). Written in an accessible style and illustrated with stories and real-life cases from veterinary practice, this book is a counterweight to the mass of 'pro' literature in existence which uncritically promotes CAVM without consideration of whether or not it could be harmful to an animal companion. The authors, both practicing veterinary surgeons, take a close look at how animals can appear to respond to treatment, even when it is ineffective. Individual alternative practices are examined-including homeopathy, acupuncture, raw diets, and the anti-vaccination lobby-to find out if they stand up to scrutiny. With a thoroughly scientific focus, this is not an attack on different belief systems but a rigorous analysis of the facts, and a consideration of typical CAVM arguments. "No Way to Treat a Friend" will be a helpful reference for those who want to know more about the various therapies themselves, as well as an invaluable resource for veterinary practitioners and anyone with an interest in animals and their welfare. Niall Taylor is veterinary surgeon working in rural Somerset, England. A general practitioner, he also has a long-standing interest in critical thinking and how it relates to complementary and alternative veterinary medicine. He is a founding member of the Campaign for Rational Veterinary Medicine and runs the rationalvetmed.net website. Alex Gough is the Head of Medical Referrals at Bath Veterinary Referrals, and is the author of the veterinary textbooks "Differential Diagnosis in Small Animal Medicine" and "Breed Predispositions to Disease in Dogs and Cats", both of which have been translated into multiple languages. *** "Veterinarians who cringe when their clients refuse vaccinations, feed their pets raw food, and consult animal psychics will relish "No Way to Treat a Friend: Lifting the Lid on Complementary and Alternative Medicine". The authors 'lift the lid' on unsavory alternative practices, some of which have successfully escaped scrutiny so that they now appear in veterinary school curricula." --Journal of the American Veterinary Medical Association, Vol. 252, No. 6, March 15, 2018(Series: Evidence Based Science) [Subject: Veterinary Medicine, Holistic Pet Care]

This handy reference provides users with an understanding of complementary and alternative treatment options for more than 130 common disease states. Concentrating on nutrition, herbs, traditional Chinese medicines, and physical therapies, the authors present both tradition- and evidence-based therapies for disorders not always responsive to conventional therapies.

This full-color text and practical clinical reference provides comprehensive information on herbal remedies for both large and small animal species. Key coverage includes clinical uses of medicinal plants, specific information on how to formulate herbal remedies, a systems-based review of plant-based medicine, and in-depth information on the different animal species--dog, cat, avian and exotic, equine, food animal, and poultry.

The Spirit of Animal Healing is the follow up to Dr. Marty Goldstein's bestselling book on holistic veterinary medicine, The Nature of Animal Healing. It is chock full of the very latest integrative medical knowledge (which combines conventional therapies with complementary and alternative medicine). Coupled with the vast amount of specialized expertise and learning Dr. Marty has gained from his own practice over the past 45 years, the book takes readers on a journey to the leading edge of integrative veterinary understanding to achieve greater insight into the minds and bodies of their animal companions. However, this book is not simply a new edition of Dr. Marty's first book with some refreshed content. It is a completely new book in which Dr. Marty turns the traditional approach to animal care upside down. The Spirit of Animal Healing provides readers with the most up to-date tools and knowledge they need to keep their dogs and cats healthy and prevent disease from occurring in the first place, instead of just treating their animal companions when they are sick. Topics covered include: *Nutrition and supplements *Integrative remedies and harmful treatments *Cutting edge therapies *The truth about vaccinations *The latest in cancer treatments *The spiritual nature of animals *True, mind-blowing cases from over the years -And much more!
