alternative futures might be in development, and what other possible futures might demand of education. Drawing on ten years of research into educational innovation and socio-technical change, working with educators, researchers, digital industries, students and policy-makers, this book questions taken-for-granted assumptions about the future of education. Arguing that we have been working with too narrow a vision of the future, Keri Facer makes a case for recognizing the challenges that the next two decades may bring, including: the emergence of new relationships between humans and

Director at the UK's Futurelab, the book helps to bring into focus the risks and opportunities for schools, students and societies over the coming two decades. It makes a powerful case for rethinking the relationship between education and social and technological change, and presents a set of key strategies for creating schools better able to meet the emerging needs of their students and communities. An important contribution to the debates surrounding educational futures, this book is compelling reading for all of those, including educators, researchers, policy-makers and

students, who are asking the question 'how can education help us to build desirable futures for everyone in the context of social and technological change?'

The Future of the World is devoted to the intriguing field of study which emerged after World War Two, futurism or futurology. Jenny Andersson explains how futurist scholars and researchers imagined the Cold War and post Cold War world and the tools and methods they would use to influence and change that world.

Futurists were a motley crew of Cold War warriors, nuclear scientists, journalists, and peace activists. Some argued it should be a closed sphere of science defined by delimited probabilities. They were challenged by alternative notions of the future as a potentially open realm. Futurism also drew on an eclectic range of repertoires, some of which were deduced from positivist social science, mathematics, and nuclear physics, and some of which sprung from alternative forms of knowledge in science fiction, journalism, or religion. These different forms of prediction laid very different
