Here Michael Jacobs notes that sustainable development has come to mean all things to all people but argues this does not mean it has no theoretical or policy relevance. It is a 'contested' rather than an empty concept, and Jacobs identifies four 'faultlines' that produce two distinct conceptions of sustainable development which he calls 'radical' and 'conservative'.

Fairness and Futurity: Essays on Environmental Sustainability and Social Justice brings together leading international figures in political theory and sociology, as well as representatives from the political community, to consider the normative issues at stake in the relationship between environmental sustainability and social justice. It raises important questions and sets out to provide the answers. If future generations are owed justice, what should we bequeath them? Is 'sustainability' an appropriate medium for environmentalists to express their demands? Is environmental protection compatible with intra-generational justice?Is environmental sustainability a luxury when social peace has broken down? These essays emerged from three intensive seminars that involved participants in constant re-evaluations of their work, and which brought three distinct groups--environmental theorists, 'mainstream' political theorists, and policy community members--into fruitful contact. In particular, the attemptto involve 'mainstream' theorists in environmental questions, and to encourage environmentalists to use intellectual resources of political theory, should be highlighted.

Environmental sustainability and social, or distributive, justice are both widely regarded as desirable social objectives. But can we assume that they are compatible with each other? In this path-breaking study, Professor Dobson, a leading expert on environmental politics, analyses the complex relationship between these two pressing objectives. Environmental sustainability is taken to be a contested idea, and three distinct conceptions of it are described and explored. These conceptions are then examined in the context of fundamental distributive questions such as: Among whom or what should distribution take place? What should be distributed? What should the principle of distribution be? The author critically examines the claims of the 'environmental justice' and 'sustainable development' movements that social justice and environmental sustainability are points on the same virtuous circle, and concludes that radical environmental demands are only incompletely served by couching them in terms of justice.

The New York Times--bestselling memoir of crippling depression and the struggle for recovery by the Pulitzer Prize-winning author of Sophie's Choice. In the summer of 1985, William Styron became numbed by disaffection, apathy, and despair, unable to speak or walk while caught in the grip of advanced depression. His struggle with the disease culminated in a wave of obsession that nearly drove him to suicide, leading him to seek hospitalization before the dark tide engulfed him. Darkness Visible tells the story of Styron's recovery, laying bare the harrowing realities of clinical depression and chronicling his triumph over the disease that had claimed so many great writers before him. His final words are a call for hope to all who suffer from mental illness that it is possible to emerge from even the deepest abyss of despair and "once again behold the stars." This ebook features a new illustrated biography of William Styron, including original letters, rare photos, and never-before-seen documents from the Styron family and the Duke University Archives.

As demand for natural resources increases due to the rise in world population and living standards, conflicts over their access and control are becoming more prevalent. This book critically assesses different approaches to and conceptualizations of resource fairness and justice and applies them to the analysis of resource conflicts. Approaches addressed include cosmopolitan liberalism, political economy and political ecology. These are applied at various scales (local, national, international) and to initiatives and instruments in public and private resource governance, such as corporate social responsibility instruments, certification schemes, international law and commodity markets. In doing so, the contributions contrast existing approaches to fairness and justice and extend them by taking into account the interplay between political scales, regions, resources, and power structures in "glocalized" resource politics. Various case studies are included concerning agriculture, agrofuels, land grabbing, water resources, mining and biodiversity. The volume adds to the academic and policy debate by bringing together a variety of disciplines and perspectives in order to advance both a research and policy agenda that puts notions of resource fairness and justice center-stage.

Voice and Environmental Communication explores how people give voice to, and listen to the voices of, the environment. This foundational book introduces the relationship between these two fundamental aspects of human existence and extends our knowledge of the role of voice in the study of environmental communication.

Twenty years after the establishment of the World Commission on Environment and Development, the 13 contributions in this interdisciplinary volume offer a broad spectrum of perspectives and research-based recommendations on environmental sustainability, social justice and the human enterprise. The cases explored cover global citizenly rights and obligations, environmental health, ecological building practices, tradable fuel permits, forestry and illegal logging, local waste management, employment and risk assessments, the genetic modification debate, nuclear and toxic waste, global environmental governance and 500 years of globalization.

Looking at the impact on political thinking caused by the idea that animals are morally important beings, this text suggests that liberalism, despite having weaknesses, is the most appropriate ideological position for the protection of animal interests.
