

## Fk 5 1 12 Performance Characteristics Recent Developments

Recognizing the exaggeration ways to get this book **fk 5 1 12 performance characteristics recent developments** is additionally useful. You have remained in right site to start getting this info. acquire the fk 5 1 12 performance characteristics recent developments link that we offer here and check out the link.

You could buy guide fk 5 1 12 performance characteristics recent developments or acquire it as soon as feasible. You could speedily download this fk 5 1 12 performance characteristics recent developments after getting deal. So, following you require the books swiftly, you can straight get it. It's hence categorically simple and hence fats, isn't it? You have to favor to in this manner

### FK-5-1-12 PERFORMANCE CHARACTERISTICS: RECENT DEVELOPMENTS

The Fike ® FK-5-1-12 system is armed and ready to eliminate any fire hazard at a moment's notice. Its 500 psi operating pressure provides ultimate design flexibility and ensures that the necessary amount of agent reaches every corner of the protected space in under ten seconds, extinguishing a fire in its very earliest stages.

### DATA SHEET - FK 5-1-12

FK-5-1-12 is a fluorinated ketone with the systematic name

1,1,1,2,2,4,5,5,5-nonafluoro-4-(trifluoromethyl)-3-pentanone and the structural formula  $\text{CF}_3\text{CF}_2$

$\text{C}(=\text{O})\text{CF}(\text{CF}_3)_2$ , a fully-fluorinated analog of ethyl isopropyl ketone. It does not deplete ozone (ODP 0) and has a global warming potential of 1 (with a lifetime of 80 years), equivalent to that of carbon dioxide. The Globally Harmonized ...

FK 5-1-12 (Fluorinated ketone) | BSL

FK-5-1-12 is the most eco-friendly chemical clean agent available. It offers all the effectiveness of other chemical agent solutions but with zero ozone-depleting potential and a global warming potential of just one. Its non-conductive and non-corrosive properties make the clean agent safe to use in all environments.

This book contains the selected, peer-reviewed manuscripts presented at the Conference on Multidisciplinary Engineering and Technology (COMET 2019), held at the University Kuala Lumpur Malaysian Spanish Institute (UniKL MSI), Kedah, Malaysia, from September 18 to 19, 2019. This event presented research being carried out in the field of mechanical, manufacturing, electrical and electronics for engineering and technology. This book also contains the manuscripts from the System Engineering and Energy Laboratory (SEELAB) research cluster, UniKL, which is actively doing research mainly focused on artificial intelligence, Internet of things, metal air batteries, advanced battery materials and energy material modelling fields. This book is the fourth edition of the progress in engineering technology, Advanced Structured Materials which provides in-depth ongoing research activities among academia of UniKL MSI.

This book describes fluorocarbon gases' preparation process, properties, applications and their evolution over time. The impact of fluorocarbons on the ozone layer and global and the development to mitigate those effects have been specially emphasized. The first major industrial fluorinated compound was developed in the 1920's, to replace ammonia and sulfur dioxide refrigerants, at the General Motors Frigidaire Division by Thomas Midgley, Jr. and Albert Leon Henne. They developed a family of fluorocarbons trademarked Freon® for auto air conditioning units revolutionizing the auto industry. Other applications were developed over time including fire extinguishers, propellants, blowing agents, cleaners, anesthesia, artificial blood and others impacting every facet of life. In spite of being in broad global use for nearly a century, fluorocarbon gases have gone through great evolution during the last few decades. In the 1980s it was discovered chlorofluorocarbon (CFC) gases are harmful to the ozone layer, mainly because of their chlorine content. Chlorine was released in the upper atmosphere when chlorofluorocarbon molecules were broken down by the high energy cosmic radiation. CFCs were progressively banned following the Montreal Protocol of 1987. CFCs were replaced by fluorinated gases containing either less chlorine (hydrofluoro-chlorocarbons, or HCFCs), which are much less damaging (about 90% less) to the ozone layer or with fluorinated gases containing no chlorine, i.e. hydrofluorocarbons or HFCs. HFC have no impact on the ozone layer but impact global warming detrimentally. HFCs are usable without need for changes to the existing refrigeration or air conditioning installations. More recently hydrofluoroolefins (HFOs), which have little or no negative impact on global warming, have been developed to replace or reduce the use of HFCs. HFOs are used as single compounds or in blends. Research and development continues to develop and replace the HCFCs and HFCs completely with environmentally friendly products. Concise Handbook of Fluorocarbon Gases presents a reference and text for the commercial fluorocarbon gases which have great many application in a wide
