State of Health takes readers inside one of the most controversial regimes of the twenty-first century—Venezuela under Hugo Ch á vez—for a revealing description of how people ' s lives changed for the better as the state began reorganizing society. With lively and accessible storytelling, Amy Cooper chronicles the pleasure people experienced accessing government health care and improving their quality of life. From personalized doctor ' s visits to therapeutic dance classes, new health care programs provided more than medical services. State of Health offers a unique perspective on the significance of the Bolivarian Revolution for ordinary people, demonstrating how the transformed health system succeeded in exciting people and recognizing historically marginalized Venezuelans as bodies who mattered.

This book examines the successful no-confidence movement led by faculty at Saint Louis University in 2013 in an effort to unseat the university president, considering the reasons for success when similar movements often fail. Through a series of chapters written by faculty from many disciplines at the university, it uses a particular episode of faculty protest to shed light on wider issues concerning the circumstances in which faculty are likely to be motivated to protest, the institutional frameworks that make protest possible and the strategies that get results. As such, it will appeal to scholars of social movements with interests in protest and mobilization in the field of education.

Contemporary society encounters profound economical, socio-ecological and political crises challenging the democratic foundation of our societies. This book addresses the potentials and challenges for Action Research supporting democratic alternatives. It offers a broad spectrum of examples from Scandinavian Action Research showing different openings towards democratic development. The book ' s first part contributes with a wide range of examples such as Action Research in relation to the Triple Helix/Mode II contexts, to design as a democratic process, to renewal of welfare work and public institutions, to innovation policies combining Action Research with gender science. In the second part of the book epistemological and ontological dimensions of Action Research are discussed addressing questions of validity criteria related to Action Research, the transformation of knowledge institutions and the specific character of creativity in Action Research. The book offers a basis for theoretical as well as practical oriented discussions and critical reflections within the field of Action Research and related research orientations, involving a wide range of actors.

This edited volume defines and compares central aspects of governance and management related to urban open spaces (UOSs) such as long-term management, combined governance and management and strategic management of UOSs. Perspectives such as ethical considerations, user participation and changes in local governmental structures frame the governance and management of UOSs. Jansson and Randrup create a comprehensive resource detailing global trends from framing and understanding to finally practising UOS governance and management. They conclude by promoting positive changes, such as proactive management and strategic maintenance plans to encourage the creation of more sustainable cities. Illustrated in full colour throughout, this book is an essential read for students and academics of landscape architecture, planning and urban design, as well as those with a particular interest in governance and management of UOSs.

Spoken language understanding (SLU) is an emerging field in between speech and language processing, investigating human/ machine and human/ human communication by leveraging technologies from signal processing, pattern recognition, machine learning and artificial intelligence. SLU systems are designed to extract the meaning from speech utterances and its applications are vast,

from voice search in mobile devices to meeting summarization, attracting interest from both commercial and academic sectors. Both human/machine and human/human communications can benefit from the application of SLU, using differing tasks and approaches to better understand and utilize such communications. This book covers the state-of-the-art approaches for the most popular SLU tasks with chapters written by well-known researchers in the respective fields. Key features include: Presents a fully integrated view of the two distinct disciplines of speech processing and language processing for SLU tasks. Defines what is possible today for SLU as an enabling technology for enterprise (e.g., customer care centers or company meetings), and consumer (e.g., entertainment, mobile, car, robot, or smart environments) applications and outlines the key research areas. Provides a unique source of distilled information on methods for computer modeling of semantic information in human/machine and human/human conversations. This book can be successfully used for graduate courses in electronics engineering, computer science or computational linguistics. Moreover, technologists interested in processing spoken communications will find it a useful source of collated information of the topic drawn from the two distinct disciplines of speech processing and language processing under the new area of SLU.
