Based on conversational practice, it is a particular way of asking questions, fostering relationships and increasing an organization's capacity for collaboration and change. It focuses on building organizations around what works, rather than trying to fix what doesn't, and acknowledges the contribution of individuals in increasing trust and organizational alignment and effectiveness. Appreciative Inquiry for Change Management explains the skills, perspectives and approaches needed for successful AI, and demonstrates how a practical conversational approach can be applied to organizational challenges in times of change. Case studies from organizations that have already integrated AI into their change management practice, including Nokia and BP, reveal why the processes are valuable and how to promote, create and generate such conversations in other organizations.
