International Academic Conference on Teaching, Learning and E-learning and International Academic Conference on Management, Economics and Marketing and International Academic Conference on Transport, Logistics, Tourism and Sport Science Budapest, Hungary 2019 (IAC-TLEI + IAC-MEM + IAC-TLTS), March 15 - 16, 2019

This book aims to attract researchers and practitioners who are working in Information Technology and Computer Science. This edited book is about basics and high level concepts regarding Blockchain Technology and Application, Multimedia Security, Information Processing, Security of Network, Cloud and IoT, Cryptography and Cryptosystem, Learning and Intelligent Computing, Information Hiding. It is becoming increasingly important to develop adaptive, intelligent computing-centric, energy-aware, secure and privacy-aware mechanisms in high performance computing and IoT applications. The book serves as a useful guide for industry persons and also helps beginners to learn things from basic to advance in the area of better computing paradigm. Our aim is intended to provide a platform for researchers, engineers, academicians as well as industrial professionals from all over the world to present their research results in security related areas. We believe that this volume not only presents novel and interesting ideas but also will stimulate interesting discussions from the participants and inspire new ideas.

The controls used on emotional arousal and cognitive processes are difficult in several societies, because of the presence of beliefs in several more issues and forces, which influence the bidirectional to and fro journey of effects between mental health and mental illness. Human beings in general accept only experiential methods of verifications and approval of reality, when they come in contact with their own mental and physical conditions. However, many may still be influenced by suggestions and produce experiences as per suggestions, which may not respond to scientific methods of verifications and corrections. Mental health and diseases, mainly in the domain of emotional health may therefore be affected by beliefs and psychological effects produced from cognitive processes and cognitive molding of emotions. Interventions in the cognitive and emotional domains do often work and changes may be brought out at the psychological and biological levels

This book offers the latest research and new perspectives on Interactive Collaborative Learning and Engineering Pedagogy. We are currently witnessing a significant transformation in education, and in order to face today’s real-world challenges, higher education has to find innovative ways to quickly respond to these new needs. Addressing these aspects was the chief aim of the 21st International Conference on Interactive Collaborative Learning (ICL2018), which was held on Kos Island, Greece from September 25 to 28, 2018. Since being founded in 1998, the conference has been devoted to new approaches in learning, with a special focus on collaborative learning. Today the ICL conferences offer a forum for exchanging information on relevant trends and research results, as well as sharing practical experiences in learning and engineering pedagogy. This book includes papers in the fields of: \* Collaborative Learning \* Computer Aided Language Learning (CALL) \* Educational Virtual Environments \* Engineering Pedagogy Education \* Game based Learning \* K-12 and Pre-College Programs \* Mobile Learning Environments: Applications It will benefit a broad readership, including policymakers, educators, researchers in pedagogy and learning theory, school teachers, the learning industry, further education lecturers, etc.

Despite the importance of regaining social roles during recovery from mental illness, the intersection between motherhood and serious mental illness is often overlooked. This book aims to rectify that neglect. A series of introductory chapters describing current research and services available to mothers with serious mental illness are followed by personal accounts of clients reflecting on their parenting experiences. One goal of the book is to provide clinicians with information that they can use to help patients struggling with questions and barriers in their attempts to parent. The inclusion of personal accounts of mothers on issues such as stigma, fears and discrimination in the context of parenting with a mental illness is intended to promote the message of mental illness recovery to a larger audience as well. Finally, it is hoped that this handbook will help inspire more research on mothers with mental illness and the creation of more services tailored to their needs.

This is a comprehensive, international, evidence-based, practical overview for professionals of the assessment and management of substance misuse.

Publisher description

Today our fatigue feels chronic; our anxieties, amplified. Proliferating technologies command our attention. Many people complain of burnout, and economic instability and the threat of ecological catastrophe fill us with dread. We look to the past, imagining life to have once been simpler and slower, but extreme mental and physical stress is not a modern syndrome. Beginning in classical antiquity, this book demonstrates how exhaustion has always been with us and helps us evaluate more critically the narratives we tell ourselves about the phenomenon. Medical, cultural, literary, and biographical sources have cast exhaustion as a biochemical imbalance, a somatic ailment, a viral disease, and a spiritual failing. It has been linked to loss, the alignment of the planets, a perverse desire for death, and social and economic disruption. Pathologized, demonized, sexualized, and even weaponized, exhaustion unites the mind with the body and society in such a way that we attach larger questions of agency, willpower, and well-being to its symptoms. Mapping these political, ideological, and creative currents across centuries of human development, Exhaustion finds in our struggle to overcome weariness a more significant effort to master ourselves.

This authoritative work comprehensively examines all aspects of addictive disorders and their treatment. Leading researchers and practitioners identify best practices in assessment and diagnosis and provide tools for working with users of specific substances. Issues in working with particular populations--including polysubstance abusers, culturally diverse patients, women, and older adults--are addressed, and widely used psychosocial and pharmacological treatment approaches are reviewed. An indispensable text for anyone studying or treating these prevalent, challenging disorders, the book describes ways to tailor interventions to each patient's needs while delivering compassionate, evidence-based care.

This visionary work explores the sensitive balance between the personal and private aspects of grief, the social and cultural variables that unite communities in bereavement, and the universal experience of loss. Its global journey takes readers into the processes of coping, ritual, and belief across established and emerging nations, indigenous cultures, and countries undergoing major upheavals, richly detailed by native scholars and practitioners. In these pages, culture itself is recognized as formed through many lenses, from the ancestral to the experiential. The human capacity to mourn, endure, and make meaning is examined in papers such as: Death, grief, and culture in Kenya: experiential strengths-based research. Death and grief in Korea: the continuum of life and death. To live with death: loss in Romanian culture. The Brazilian ways of living, dying, and grieving. Death and bereavement in Israel: Jewish, Muslim, and Christian perspectives. Completing the circle of life: death and grief among Native Americans. It is always normal to remember: death, grief, and culture in Australia. The World of Bereavement will fascinate and inspire clinicians, providers, and researchers in the field of death studies as well as privately-held professional training programs and the bereavement community in general.
