There are now as many mobile phones in the world as there are people. We carry them around with us wherever we go. And while we used to just speak into them, now mobiles are used to do all kinds of tasks, from talking to twittering, from playing a game to paying a bill. Jon Agar takes the mobile to pieces, tracing what makes it work, and puts it together again, showing how it was shaped in different national contexts in the United States, Europe, the Far East and Africa. He tells the story from the early associations with cars and the privileged, through its immense popular success, to the rise of the smartphone. Few scientific revolutions affect us in such a day-to-day way as the development of the mobile phone. Jon Agar's deft history explains exactly how this revolution has come about - and where it may lead in the future.

Today, a prosperous technology company can be disrupted and put out of business in a blink of an eye. The development of many different technologies that once took years can be done in months or weeks. There are also few examples where the engineering work is completely contained in one company or one engineering organization. Business strategies have evolved. The analysis of competitive forces in an industry has matured to include the concepts of disruptive innovation and cooperation. In an ecosystem characterized by rapid changes in technology and how it is developed, an engineering R&D organization will quickly become irrelevant if it fails to keep the pace of

innovation needed to succeed. This book provides readers with a holistic approach to engineering management. We have seen that successful managers create a strong foundation of a common culture that enables learning, value creation, diversity and inclusion. They create organizations that tightly connect the core engineering functions of strategic planning, research and development and are able to comprehend and direct a broader R&D system that stretches well beyond their own organization's boundary. Doing all of this to extract the greatest value in the least amount of time is what we call holistic engineering management. The content for this book is based on over 105 years of combined experience working in a rapidly changing industry. In most chapters, practical examples and case studies of the concepts provided are given. As noted in the foreword by Pat Gelsinger (CEO, VMWare) and in comments from other technology leaders: Aart de Geus (Chairman and co-CEO, Synopsys, Inc.), Aicha Evans (CEO, Zook, Inc.), William M Holt, (former Executive VP, GM, Intel, Corp.), and Amir Faintuch (Senior VP, GM, GlobalFoundries, Inc.), this book will be valuable for students of engineering management and current engineering managers.

The Value Trail offers a comprehensive approach to competitive analysis and strategy, considering value as a central theme and from a customer based perspective. It fully develops a disruptive new model of strategic analysis (namely the Three Dimensions of Value model) that approaches the drivers of success within a business from a value-based perspective: how value is understood by the customer (Appreciation of Value), and how it is boosted (Concentration of Value) or subtracted (Predation of Value) by different business agents. From this business-level perspective, the book progressively moves down to a company level to allow the reader to understand how companies can set corporate goals and leverage internal resources to deliver successful value propositions. To close the circle, special attention is paid to the definition of an integrated monitoring system based on both market (outside-in perspective) and company (inside-out perspective) metrics. On top of that, the book also identifies, in line with this new theory, the most relevant existing competitive models, together with a comprehensive analysis of their strategic approach and success drivers. If you are an entrepreneur looking for a solid and understandable guide to fully cover all company stages, a manager seeking to improve the implementation of operational and strategic processes or a practitioner in search of a disruptive
