 Scientific research on nonverbal communication and behavior began with the 1872 publication of Charles Darwin's The Expression of the Emotions in Man and Animals. Since that time, abundant research has been conducted regarding types, effects, and expressions of unspoken communication and behavior. While these signals are often so subtle that we are not consciously aware of them, research has identified several different nine types of nonverbal communication.

 Albert Mehrabian. Image supplied rights-cleared by the Chartered Management Institute, 2015. Professor Mehrabian (1939-) believes that there are three core elements in the effective face-to-face communication of emotions or attitudes: nonverbal behaviour (facial expressions, for example), tone of voice, and the literal meaning of the spoken word. These three essential elements, Mehrabian argues, account for how we convey our liking, or disliking, of another person.

Even though our society subtly discourages the verbal expression of emotions, most of us, in ostensibly conforming to our roles, nevertheless manage to express likes, dislikes, status differences, personalities, as well as weaknesses in nonverbal ways. Using vocal expressions; gestures, postures, and movements, we amplify, restrict, or deny what our words say to one another, and even say some things with greater facility and efficiency than with words. In this new, multidimensional approach to the subject of nonverbal communication Albert Mehrabian brings together a great deal of original work which includes descriptions of new experimental methods that are especially suited to this field, detailed findings of studies scattered throughout the literature, and most importantly, the integration of these findings within a compact framework. The framework starts with the analysis of the meanings of various nonverbal behaviors and is based on the fact that more than half of the variance in the significance of nonverbal signals can be described in terms of the three orthogonal dimensions of positiveness, potency or status, and responsiveness. These three dimensions not only constitute the semantic space for nonverbal communication, but also help to identify groups of behaviors relating to each, to describe characteristic differences in nonverbal communication, to analyze and generate rules for the understanding of inconsistent messages, and to provide researchers with new and comprehensive measures for description of social behavior. This volume will be particularly valuable for both the professional psychologist and the graduate student in psychology. It will also be of great interest to professionals in the fields of speech and communication, sociology, anthropology, and psychiatry.

A resource primarily for academics (professors and students) in the field of nonverbal communication. Researchers can use this page to connect with their colleagues, search relevant journals (including the current contents of the Journal of Nonverbal Behavior), find out about the latest books published in the field, and obtain information about teaching and training tools.

The APA Handbook of Nonverbal Communication provides scholarly reviews of state-of-the-art knowledge in the areas of nonverbal communication and nonverbal behaviors. It includes an entire section devoted to new and improved methodologies and technologies that allow for the recording, capture, and analysis of nonverbal behaviors. The primary audience for the book is researchers in the area, as well as students in graduate-level classes on nonverbal communication or behavior. The handbook is organized around four broad themes. The first concerns the history of the field. The second concerns the factors of influence of nonverbal communication and encompasses the main theoretical and conceptual frameworks within which research on nonverbal communication occurs. The third theme presents the separate sources of nonverbal communication and behavior. The fourth theme concerns advances in research methodologies.

This volume on nonverbal communication studies, the most multi- and interdisciplinary contribution to this field in almost twenty years, offers numerous suggestions for further research in many hitherto unexplored areas. The twenty contributions include the most recent theoretical and empirical crosscultural studies of gestures from historical, communicative and sociopsychological perspectives. In addition the volume presents novel psychological and clinical studies of nonverbal behaviors in connection with, for instance, aphasias and children's experience of artificial limbs. A whole section is devoted to nonverbal communication in literature and literary translation, and a discussion of art and literature, which opens new avenues for literary analysis and a better understanding of reading as a recreational experience. A unique feature is a discussion of Nonverbal Communication Studies as an academic area (including detailed outlines of three current courses), complemented by an extensive bibliography.

The Handbook of Communication Skills is recognised as one of the core texts in the field of communication, offering a state-of-the-art overview of this rapidly evolving field of study. This comprehensively revised and updated fourth edition arrives at a time when the realm of interpersonal communication has attracted immense attention. Recent research showing the potency of communication skills for success in many walks of life has stimulated considerable interest in this area, both from academic researchers, and from practitioners whose day-to-day work is so dependent on effective social skills. Covering topics such as non-verbal behaviour, listening, negotiation and persuasion, the book situates communication in a range of different contexts, from interacting in groups to the counselling interview. Based on the core tenet that interpersonal communication can be conceptualised as a form of skilled activity, and including new chapters on cognitive behavioural therapy and coaching and mentoring, this new edition also places communication in context with advances in digital technology. The Handbook of Communication Skills represents the most significant single contribution to the literature in this domain. Providing a rich mine of information for the neophyte and practising professional, it is perfect for use in a variety of contexts, from theoretical mainstream communication modules on degree programmes to vocational courses in health, business and education. With contributions from an internationally renowned range of scholars, this is the definitive text for students, researchers and professionals alike.

Drawing significantly on both classic and contemporary research, Nonverbal Communication speaks to today's students with modern examples that illustrate nonverbal communication in their lived experiences. This new edition, authored by three of the foremost scholars in nonverbal communication, builds on the approach pioneered by Burgoon, Buller and Woodall which focused on both the features and the functions that comprise the nonverbal signaling system. Grounded in the latest multidisciplinary research and theory, Nonverbal Communication strives to remain very practical, providing both information and application to aid in comprehension.
