"Thousands of parents, from regular moms and dads to Hollywood superstars, have come to baby expert Dr. Harvey Karp to learn his remarkable techniques for soothing babies and increasing sleep. Now his landmark book--fully revised and updated with the latest insights into infant sleep, bedsharing, breastfeeding, swaddling, and SIDS risk--can teach you too!"--Back cover.

John, aged sixty, suffered a stroke and recovered fully, except in one respect: although he can see perfectly, he can no longer recognise faces, even his own reflection in a mirror. Whenever Francesca touches a particular texture, she experiences a vivid emotion: denim = extreme sadness; wax = embarrassment; orange peel = shock. Jimmie, whose left arm was recently amputated, can still feel it - and it's itchy. Our brains are the most enchanting and complex things in the known universe - but what happens when they go wrong? Dr V. S. Ramachandran, 'the Sherlock Holmes of brain science' and one of the world's leading neuroscientists, has spent a lifetime working with patients who suffer from rare and baffling brain conditions. In The Tell-Tale Brain, he tells their stories, and explores what they reveal about the greatest mystery of them all: how our minds work, and what makes each of us so uniquely human.

How was it possible that, in a rather peaceful and, to all intents and purposes, not particularly antisemitic Dutch society, more than 75% of the Jewish population were arrested, deported or murdered in concentration camps during the Shoah? Can all of this be blamed on the Nazi occupiers? The eminent historian, Hans Derks, explains this mystery for the first time by looking closely at the social and religious characteristics of Dutch society. He also unveils the extensive collaboration of the country's

state-bureaucracy with the German authorities. This uniquely perpetrator-oriented book about the Dutch Shoah offers shocking conclusions about the persistent contribution of Dutch scholars to racist ideologies and eugenic measures aimed at creating a new, racially pure Dutch society under an authoritarian leadership.

First published in 1989: This text was written to provide a relatively broad comprehensive study of the thymus in health and disease, including relationships to the endocrine system, immune system, and again.

Crystal defects can no longer be thought of as a scientific curiosity, but must be considered an important aspect of solid-state science. This is largely because many of the more interesting properties of crystalline solids are disproportionately dominated by effects due to a tiny concentration of imperfections in an otherwise perfect lattice. The physics of such lattice defects is not only of significance in a great variety of applications, but is also interesting in its own right. Thus, an extensive science of point defects and dislocations has been constructed during the past two and a half decades. Stimulated by the technological and scientific interest in plasticity, there have appeared in recent years rather a large number of books dealing with dislocations; in the case of point defects, however, only very few broad and extensive treatments have been published. Thus, there are few comprehensive, tutorial sources for the scientist or engineer whose research activities are affected by point defect phenomena, or who might wish to enter the field. It is partially to fill this need that the present treatise aims.

A beloved adventure classic, *The Swiss Family Robinson* is a tale of courage in the face of the unknown that has endured the test of time. Trapped on a remote island after a storm leaves them shipwrecked, a Swiss pastor, his wife, and their four sons must pull together if they want to survive. Hunting, farming, and exploring a strange land for the first time, each son not only tests his own bravery, but discovers a skill all his own as they each adapt to this new, wild place. Full of wonder, revelation, and invention, this timeless adventure story has sparked imaginations of readers young and old for generations. Featuring an appendix of discussion questions, this Diversion Classics edition is ideal for use in book groups and classrooms. For more classic titles like this, visit www.diversionbooks.com/ebooks/diversion-classics

This book constitutes the refereed conference proceedings of the 9th International Conference on Advances in Computer Entertainment, ACE 2012, held in Kathmandu, Nepal, in November 2012. The 10 full paper and 19 short papers presented together with 5 papers from the special track Arts and Culture and 35 extended abstracts were carefully reviewed and selected from a total of 140 submissions in all categories. The papers cover topics across a wide spectrum of disciplines including computer science, design, arts, sociology, anthropology, psychology, and marketing. Focusing on all areas related to interactive entertainment they aim at stimulating discussion in the development of new and compelling entertainment computing and interactive art concepts and applications.
