In Exercises 19 through 24, find the matrix  $B$  of the linear transformation  $T(x) = Ax$  with respect to the basis  $\mathcal{B} = (\mathbf{v}_1, \mathbf{v}_2)$ . For practice, solve each problem in three ways: (a) Use the formula  $B = S^{-1}AS$  (b) use a commutative diagram (as in Examples 3 and 4), and (c) construct  $B$  column by column.

MyMathLab is not a self-paced technology and should only be purchased when required by an instructor. If you would like to purchase "both "the physical text and MyMathLab, search for: 9780134022697 / 0134022696 Linear Algebra and Its Applications plus New MyMathLab with Pearson eText -- Access Card Package, 5/e With traditional linear algebra texts, the course is relatively easy for students during the early stages as material is presented in a familiar, concrete setting. However, when abstract concepts are introduced, students often hit a wall. Instructors seem to agree that certain concepts (such as linear independence, spanning, subspace, vector space, and linear transformations) are not easily understood and require time to assimilate. These concepts are fundamental to the study of linear algebra, so students' understanding of them is vital to mastering the subject. This text makes these concepts more accessible by introducing them early in a familiar, concrete " $\mathbb{R}^n$ " setting, developing them gradually, and returning to them throughout the text so that when they are discussed in the abstract, students are readily able to understand.

Linear transformations and mappings are a running theme in this text. Geometric explication and history are heavily integrated. After the introduction of eigenvalues, dynamical systems becomes a running sub-theme. Has the finest collection of problems ever produced for this course.
