In this book, leading authors in the field discuss development of Ambient Assisted Living. The contributions have been chosen and invited at the 6th AAL congress, Berlin. It presents new technological developments which support the autonomy and independence of individuals with special needs. As the technological innovation raises also social issues, the book addresses micro and macro economical aspects of assistive systems and puts an additional emphasis on the ethical and legal discussion. The presentation is supported by real world examples and applications.

Assessments, understood as tools for tracking what and how well students have learned, play a critical role in the classroom. Developing Assessments for the Next Generation Science Standards develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in A Framework for K-12 Science Education (Framework) and Next Generation Science Standards (NGSS). These documents are brand new and the changes they call for are barely under way, but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education. The new Framework and the NGSS are designed to guide educators in significantly altering the way K-12 science is taught. The Framework is aimed at making science education more closely resemble the way scientists actually work and think, and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions - the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines, and the core ideas of the disciplines - and argues that they should be interwoven in every aspect of science education, building in sophistication as students progress through grades K-12. Developing Assessments for the Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment, in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.

The latest research innovations and enhanced technologies have altered the discipline of materials science and engineering. As a direct result of these developments, new trends in Materials Science and Engineering (MSE) pedagogy have emerged that require attention. The Handbook of Research on Recent Developments in Materials Science and Corrosion Engineering Education brings together innovative and current advances in the curriculum design and course content of MSE education programs. Focusing on the application of instructional strategies, pedagogical frameworks, and career preparation techniques, this book is an essential reference source for academicians, engineering practitioners, researchers, and industry professionals interested in emerging and future trends in MSE training and education.

The National Science Education Standards address not only what students should learn about science but also how their learning should be assessed. How do we know what they know? This accompanying volume to the Standards focuses on a key kind of assessment: the evaluation that occurs regularly in the classroom, by the teacher and his or her students as interacting participants. As students conduct experiments, for example, the teacher circulates around the room and asks individuals about their findings, using the feedback to adjust lessons plans and take other actions to boost learning. Focusing on the teacher as the primary player in assessment, the book offers assessment guidelines and explores how they can be adapted to the individual classroom. It features examples, definitions, illustrative vignettes, and practical suggestions to help teachers obtain the greatest benefit from this daily evaluation and tailoring process. The volume discusses how classroom assessment differs from conventional testing and grading-and how it fits into the larger, comprehensive assessment system.

This curriculum guide is designed to assist teachers at all levels in their efforts to infuse law-related education (Ire) into their regular course of instruction. The curriculum goals are (1) to promote good citizenship through an understanding of and active participation in a democratic society; (2) to foster respect, understanding, and appreciation of diversity; (3) to develop, improve and integrate thinking and interpersonal skills; and (4) to increase knowledge of and insights into the personal relevance of law and the Constitution. The first part of the guide provides a framework for organizing and selecting (Ire) activities based on concepts of power, justice, liberty, and equality. The guide presents teaching strategies appropriate to Ire including case studies, mock trials, resource persons, role playing, simulations, and various games. Lesson plans are divided into levels--lower and upper elementary, middle, and high school--and provide concepts, rationale, objectives, materials, procedures, and assessment. Many of the lesson plans include handouts for student activities and some include primary documents such as the Constitution of Virginia. The appendix includes a copy of the United States Constitution. (Jd).

The First International Conference on Concrete Repair, Rehabilitation and Retrofitting (ICRRR 2005) was held in Cape Town, South Africa, from 21-23 November 2005. The conference was a collaborative venture by researchers from the South African Research Programme in Concrete Materials (based at the Universities of Cape Town and The Witwatersrand) and The Construction Materials Section at Leipzig University in

Germany. The conference has come at an opportune moment for concrete construction worldwide and sought to focus on an increasingly important aspect in modern infrastructure provision and retention: that of appropriately repairing, maintaining, rehabilitating, and if necessary retrofitting existing infrastructure with a view to extending its life and maximising its economic return. The conference Proceedings contain papers, presented at the conference, and classified into a total of 15 sub themes which can be grouped under the four main themes of (i) Concrete durability aspects, (ii) Condition assessment of concrete structures, (iii) Concrete repair, rehabilitation and retrofitting, and (iv) Performance monitoring and health assessment. The major interest in terms of submissions exists in the fields of concrete durability aspects in connection with material compositions, NDE/NDT and measurement techniques, repair methods and materials, and structural strengthening and retrofitting techniques. The large number of high-quality papers presented and the wide range of relevant topics covered confirm that these Proceedings will be a valued reference for many working in the important fields of concrete durability and repair and that they form a suitable base for discussion and provide suggestions for future development and research.

This volume explores two aspects of change within higher education: macro factors governing and influencing the institutional environment, and micro issues taking place within the institutions themselves. The first part of the book examines some of the micro issues that influence business and economics pedagogy. It presents reflections and analyses of teaching roles and values, the enhancement of the student learning experience with technology and real world experiences, and what students want and need to learn. The second part of the book looks at the wider institutional environment of change – the shifts in values, new stakeholders, and a change of focus toward developing skills students need to succeed in business. The book highlights the inter-related nature of these changes and shows that both aspects are important in motivating and inspiring students to be able participants in a 21st century global society. Its focus on interdisciplinarity, curriculum structures, and changing stakeholders helps to analyse the roles and models of business and economics education in addressing the needs of today's global environment.

Prioritization, Delegation, and Assignment: Practice Exercises for the NCLEX® Examination, 4th Edition is the original and most popular NCLEX review book on the market focused exclusively on building prioritization, delegation, and patient assignment skills! Using a unique simple-to-complex approach, this best-selling text establishes your foundational knowledge of management of care, then provides exercises of increasing difficulty to help you transition to practice in today's fast-paced healthcare environment. This new edition features more than 60 pages of additional questions, a completely new pharmacology chapter and questions, a content re-alignment to match the latest National League for Nursing guidelines for delegation and patient assignment, increased inclusion of LGBTQ-related scenarios, updated infection control coverage, and much more! Answer keys offer a detailed rationale and an indication of the focus of the question to encourage formative assessment. Interactive practice quizzing on Evolve allows you to create a virtually unlimited number of practice sessions in Study Mode or Exam Mode. Emphasis on the NCLEX Examination's management-of-care focus addresses the heavy emphasis on prioritization, delegation, and patient assignment in the current NCLEX-RN® Examination. Updated content throughout matches the latest evidence-based guidelines and treatment protocols. Improved navigation and usability with color tabs on the edges of the book's pages and with answers directly following each chapter. UNIQUE! Three-part organization establishes foundational knowledge and then provides exercises of increasing difficulty to help you build confidence in your prioritization, delegation, and patient assignment skills. NEW! More than 60 pages of new questions provide additional practice prepare you for the prioritization, delegation, and patient assignment questions on the NCLEX-RN® Exam. NEW! Pharmacology chapter and expanded pharmacology questions throughout prepare you for the strong pharmacology focus of the latest NCLEX-RN® Exam. NEW! Re-alignment of delegation and assignment content and answer key coding to reflect the latest National League for Nursing (NLN) guidelines on what constitutes delegation and what constitutes patient assignment. NEW! Increased emphasis on infection control addresses the growing problems of antibiotic resistance and the rapid spread of infectious disease resulting from our globally mobile society and from growing resistance to vaccination. NEW! Increased inclusion of LGBTQ scenarios and healthcare concerns prepares you for patient-centered care with LGBTQ clients.

This essential text and practitioner guide is unique in its emphasis on fostering academic learning as well as life skills. In-depth chapters cover reading, mathematics, science, and social studies, as well as health care needs, communication and social skills, daily living, and job skills. The expert authors present research-based best practices for assessing each student's needs and crafting individualized education plans that build a strong foundation for life in the community. User-friendly features include engaging vignettes, sample lesson plans, and reproducible checklists and forms. The text is a contemporary follow-up to Diane M. Browder's widely adopted Curriculum and Assessment for Students with Moderate and Severe Disabilities.

Equips new and experienced educators with the skills required to succeed in live online learning. Based on years of experience and research, the authors offer best practice guidelines and practical resources. A life saver for anyone wishing to develop creative, innovative teaching methods to provide great online experiences for their learners.
