Discover why and how schools must become places where thinking is valued, visible, and actively promoted. As educators, parents, and citizens, we must settle for nothing less than environments that bring out the best in people, take learning to the next level, allow for great discoveries, and propel both the individual and the group forward into a lifetime of learning. This is something all teachers want and all students deserve. In *Creating Cultures of Thinking: The 8 Forces We Must Master to Truly Transform Our Schools*, Ron Ritchhart, author of *Making Thinking Visible*, explains how creating a culture of thinking is more important to learning than any particular curriculum and he outlines how any school or teacher can accomplish this by leveraging 8 cultural forces: expectations, language, time, modeling, opportunities, routines, interactions, and environment. With the techniques and rich classroom vignettes throughout this book, Ritchhart shows that creating a culture of thinking is not about just adhering to a particular set of practices or a general expectation that people should be involved in thinking. A culture of thinking produces the feelings, energy, and even joy that can propel learning forward and motivate us to do what at times can be hard and challenging mental work.

What does it really mean to be intelligent? Ron Ritchhart presents a new and powerful view of intelligence that moves beyond ability to focus on cognitive dispositions such as curiosity, skepticism, and open mindedness. Arguing persuasively for this new conception of intelligence, the author uses vivid classroom vignettes to explore the foundations of intellectual character and describe how teachers can enculturate productive patterns of thinking in their students. "Intellectual Character" presents illustrative, inspiring stories of exemplary teachers to help show how intellectual traits and thinking dispositions can be developed and cultivated in students to promote successful learning. This vital book provides a model of authentic and powerful teaching and offers practical strategies for creating classroom environments that support thinking.

A new approach to contemporary documentation and learning. What is learning? How do we look for, capture, reflect on, and share learning to foster meaningful and active engagement? This vital resource helps educators answer these questions. *A Guide to Documenting Learning* facilitates student-driven learning and helps teachers reflect on their own learning and classroom practice. This unique how-to book explains the purposes and different types of documentation. Teaches different "LearningFlow" systems to help educators integrate documentation throughout the curriculum. Provides authentic examples of documentation in real classrooms. Is accompanied by a robust companion website where readers can find even more documentation examples and video tutorials.

"What's going on in this picture?" With this one question and a carefully chosen work of art, teachers can start their students down a path toward deeper learning and other skills now encouraged by the Common Core State Standards. The Visual Thinking Strategies (VTS) teaching method has been successfully implemented in schools, districts, and cultural institutions nationwide, including bilingual schools in California, West Orange Public Schools in New Jersey, and the San Francisco Museum of Modern Art. It provides for open-ended yet highly structured discussions of visual art, and significantly increases students' critical thinking, language, and literacy skills along the way. Philip Yenawine, former education director of New York's Museum of Modern Art and cocreator of the VTS curriculum, writes engagingly about his years of experience with elementary school students in the classroom. He reveals how VTS was developed and demonstrates how teachers are using art—as well as poems, primary documents, and other visual artifacts—to increase a variety of skills, including writing, listening, and speaking, across a range of subjects. The book shows how VTS can be easily and effectively integrated into elementary classroom lessons in just ten hours of a school year to create learner-centered environments where students at all levels are involved in rich, absorbing discussions.

"Introducing a spelling test to a student by saying, 'Let's see how many words you know,' is different from saying, 'Let's see how many words you know already.' It is only one word, but the already suggests that any words the child knows are ahead of expectation and, most important, that there is nothing permanent about what is known and not known." — Peter Johnston Sometimes a single word changes everything. In his groundbreaking book *Choice Words*, Peter Johnston demonstrated how the things teachers say (and don't say) have surprising consequences for the literate lives of students. Now, in *Opening Minds: Using Language to Change Lives*, Peter shows how the words teachers choose affect the worlds students inhabit in the classroom, and ultimately their futures. He explains how to engage children with more productive talk and to create classrooms that support not only students' intellectual development, but their development as human beings. Grounded in research, *Opening Minds: Using Language to Change Lives* shows how words can shape students' learning, their sense of self, and their social, emotional and moral development. Make no mistake: words have the power to open minds – or close them.
