"Remarkable...Ekirch has emptied night's pockets, and laid the contents out before us." —Arthur Krystal, The New Yorker Bringing light to the shadows of history through a "rich weave of citation and archival evidence" (Publishers Weekly), scholar A. Roger Ekirch illuminates the aspects of life most often overlooked by other historians—those that unfold at night. In this "triumph of social history" (Mail on Sunday), Ekirch's "enthralling anthropology" (Harper's) exposes the nightlife that spawned a distinct culture and a refuge from daily life. Fear of crime, of fire, and of the supernatural; the importance of moonlight; the increased incidence of sickness and death at night; evening gatherings to spin wool and stories; masqued balls; inns, taverns, and brothels; the strategies of thieves, assassins, and conspirators; the protective uses of incantations, meditations, and prayers; the nature of our predecessors' sleep and dreams—Ekirch reveals all these and more in his "monumental study" (The Nation) of sociocultural history, "maintaining throughout an infectious sense of wonder" (Booklist).

The original series, Advances in Prostaglandin Research, edited by Sultan M. M. Karim, was published by MTP Press in three volumes in 1975 and 1976. A glance at those books illustrates the progress that has been made since then. The thromboxanes were mentioned twice (first publication 1975) and prostacyclin not once (first publication 1976); leukotrienes were only on the horizon. The amazing generation of research data in the last 10-15 years has given new, broad insights into many areas, including asthma, inflammation, renal, cardiovascular and gastrointestinal diseases and in reproduction, and has led in some instances to real clinical benefit. This series, Advances in Eicosanoid Research, reflects the current understanding of prostaglandins, thromboxanes and leukotrienes. The aim is to provide an introductory background to each topic and the most up-to-date information available. Although each book stands alone, the eicosanoids cut across many boundaries in their basic actions; selected chapters from each book in the series will provide illuminating and productive information for all readers which will advance their education and research. In the production of this series, I must acknowledge with pleasure my collaboration with editors and authors and the patient endeavours of Dr Michael Brewis and the staff at MTP Press.
