In this newly revised edition of his readable and thoughtful survey, Mikiso Hane presents the essential facts of modern Japanese history. He integrates political events with the cultural and economic activities of each period and is particularly sensitive to the conditions of life in all strata of the population. The new edition covers a variety of important developments through the early 1990s, giving special consideration to how traditional Japanese modes of thought and behavior have affected these recent developments.As background for his study of the modern era, Hane summarizes the early history of Japan, with due attention to institutions that have molded the nature of Japanese society—including Shinto, the Emperor system, Buddhism, and feudalism. Hane then sets the stage for modern Japan with a detailed and analytical discussion of the Tokugawa period.The survey takes on immediacy as it chronicles the growth of Westernization in the nineteenth century and the ascendancy of militarism in the twentieth. The chapters on Meiji Japan balance politics and economics with a close look at social conditions, education, and religion. The story of Japan's role in World War II, its defeat in 1945, and the occupation is told dispassionately but from a Japanese vantage point. Hane's portrait of life in postwar Japan is enriched by material on contemporary literature, Japanese youth culture, and other intellectual developments.The last chapter focuses on the dramatic economic surge since 1970 and the accompanying social changes in life-style and attitudes, particularly for women and the working class. Reiterating themes that permeate the book, a final section reviews Japan's relations with the outside world, especially with the United States, and the ongoing tension between the old and the new, the traditional and the modern. A useful bibliography and well-chosen illustrations enhance the text.

Spirited Prospect: A Portable History of Western Art from the Paleolithic to the Modern Era is a lively, scholarly survey of the great artists, works, and movements that make up the history of Western art. Within the text, important questions are addressed: What is art, and who is an artist? What is the West, and what is the Canon? Is the Western Canon closed or exclusionary? Why is it more important than ever for individuals to engage and understand it? Readers are escorted on a concise, chronological tour of Western visual culture, beginning with the first art produced before written history. They learn about the great ancient cultures of Egypt, Mesopotamia, Greece, and Italy; the advent of Christianity and its manifestations in Byzantine, Medieval, Renaissance, and Baroque art; and the fragmentation of old traditions and the proliferation of new artistic choices that characterize the Enlightenment and the Modern Era. The revised second edition features improved formatting, juxtaposition, sizing, and spacing of images throughout. Spirited Prospect is an ideal textbook for introductory courses in the history of art, as well as courses in studio art and Western civilization at all levels.

The development of science, according to respected scholars Peter J. Bowler and Iwan Rhys Morus, expands our knowledge and control of the world in ways that affect-but are also affected by-society and culture. In Making Modern Science, a text designed for introductory college courses in the history of science and as a single-volume introduction for the general reader, Bowler and Morus explore both the history of science itself and its influence on modern thought. Opening with an introduction that explains developments in the history of science over the last three decades and the controversies these initiatives have engendered, the book then proceeds in two parts. The first section considers key episodes in the development of modern science, including the Scientific Revolution and individual accomplishments in geology, physics, and biology. The second section is an analysis of the most important themes stemming from the social relations of science-the discoveries that force society to rethink its religious, moral, or philosophical values. Making Modern Science thus chronicles all major developments in scientific thinking, from the revolutionary ideas of the seventeenth century to the contemporary issues of evolutionism, genetics, nuclear physics, and modern cosmology. Written by seasoned historians, this book will encourage students to see the history of science not as a series of names and dates but as an interconnected and complex web of relationships between science and modern society. The first survey of its kind, Making Modern Science is a much-needed and accessible introduction to the history of science, engagingly written for undergraduates and curious readers alike.

"Featuring 180 volumes from the collection ... an extensive overview of important artists of the modern period and the art they created by integrating image and text"--Foreword.
