Real Estate and Planning at the University of Reading ranks 2nd in the UK for Land and Property Management (Complete University Guide, 2021).

The challenge of housing is increasingly recognised in international policy discussions in connection to the processes of migration, climate change, and economic globalisation. This book addresses the challenges of housing and emerging solutions along the lines of three major dynamics: migration, climate change, and neo-liberalism. It explores the outcomes of neo-liberal »enabling« ideas, responses to extreme climate events with different housing approaches, and how the dynamics of migration reshape the urban housing provision in a changing world. The aim is to contextualise the theoretical discourses by reflecting on the case study context of the eleven papers published in this book. With forewords by Raquel Rolnik (University Sao Paulo) and Mohammed El Sioufi (UN-Habitat).

From the pilgrims to Las Vegas, hippie communes to the smart city, utopianism has shaped American landscapes. The Puritan small town was the New Jerusalem. Thomas Jefferson dreamed of rational farm grids. Reformers tackled slums through crusades of civic architecture. To understand American space, Alex Krieger looks to the drama of utopian ideals.

This book provides an up-to-date introduction to the fundamental methods related to planning and human services delivery. These methods aid planners in answering crucial questions about human activities within a given community. This book brings the pillars of planning methods together in an introductory text targeted towards senior level undergraduate and graduate students. Planning professionals will also find this book an invaluable reference.

This book critically examines different forms of urban-rural links for sustainable development in different countries. As intertwined processes of globalization, digitalization, environmental challenges and the search for sustainable development continue, rural and urban areas around the world become increasingly interconnected and interdependent. This book contributes to understanding the role of this growing interconnectedness from an economic geographical perspective. It does so by theoretically and empirically addressing the various existing linkages, such as food networks, value chains, and regional governance at local, regional, national and international levels. In doing so, contributions extend and contrast existing approaches dealing with urban and rural areas separately by considering the interplay between these two as well as their consequences for sustainability transition pathways. This edited volume adds to the academic and policy debate by bringing together a variety of concepts and themes in order to shift the research and policy agenda away from simple dichotomy to different notions of rural-urban linkages. Offering multidisciplinary insights into rural-urban linkages, the book will be of interest to decision-makers, practitioners and researchers in the fields of economic geography, regional planning, food studies and economics.

Originally published in 1997, Urban Environmental Planning provides a groundbreaking overview of innovative methods and techniques for measuring and managing the environmental effects of urban land uses on other urban activities. Fully revised and updated, this second edition brings together a team of leading environmental planners and policy makers from the US, UK, Europe and SE Asia to address the central questions confronting sustainable urban development. Typical questions include: How can you measure and manage the negative environmental effects of intrusive urban activities such as manufacturing and transport on sensitive land uses including residential and recreational areas? Can a balance be found between reducing these effects through means such as separating conflicting land uses? While other sources identify the need for effective programmes to improve urban environmental quality, this volume describes and assesses analytical methods and implementing programmes practised by leading communities around the world.

The Kenya Gazette is an official publication of the government of the Republic of Kenya. It contains notices of new legislation, notices required to be published by law or policy as well as other announcements that are published for general public information. It is published every week, usually on Friday, with occasional releases of special or supplementary editions within the week.

This book advances the reflexion into how temporary urbanism is shaping cities across the world. Temporary urbanism has become a core concept in urban development, and its application is increasingly crossing the borders of both the North and the Global South. There is a need to reflect upon the diverse ways of understanding and implementing the temporary in the production of space internationally and discuss what this means, for both research and practice. Divided into two sections, the book compiles and reflects upon the various attempts to reframe and reconceptualise temporary urbanism. The first section focuses on reframing and reconceptualising temporary urbanisms. It develops the argument that temporary urbanism allows a reinterrogation of the role of temporalities and non-permanence into the place-making process and hence in the production and reproduction of cities, including the adaptability of existing spaces and production of new spaces. While drawing upon different theoretical and conceptual framings (permeability, assemblage, rhythms, waiting, ...), authors bring insights from various case studies: the Dublin Biennial (Ireland), temporary uses in Geneva (Switzerland), temporary urban settlements in sub-Saharan Africa, refugees' camp in Beirut (Lebanon) and political protests in Skopje (Republic of Macedonia). The second section looks at unwrapping the complexity and diversity of temporary urbanisms. It aims at securing a better understanding of the complexity and diversity of temporary urbanism, including a dialogue between various experiences both in the Global North and in the Global South. It looks at the implications of temporary urbanism in the delivery of planning and considers how and by whom cities are governed and transformed. Again, a range of examples are mobilised by contributors spanning from temporary uses and projects in London (UK), Santiago (Chile), Paris (France), Vancouver (Canada), Barcelona (Spain), Budapest (Hungary), Beijing (China), Sao Paulo (Brazil) and Milwaukee (USA). This book will be of interests to all researchers, practitioners, and students who want to gain a more thorough understanding of the topic of temporary urbanism, compare its diversity and similarities across different contexts, and reflect on the wider implications of temporary urbanisms for urban transformations.

This book provides a review of the bioregionalist theory in the field of spatial planning and design as a suitable approach to cope with the growing concerns about the negative effects of metropolization processes and the need for a sustainable transition. The book starts out with a section on rethinking places for community life, and discusses the reframing of regional governance and development as well as social justice in spatial planning. It introduces the concept of the urban bioregion, a pivotal concept that underpins balanced polycentric spatial patterns and supports self-reliant and fair local development. The second part of the book focuses on planning, and particularly on the issues that arise from the 'circular' recovery of the relation between city and agro-ecosystems for integrated planning and resilience of settlements and discusses topics such as foodshed planning, biophilic urbanism and the integration of rural development and spatial planning. This volume sets out the reference framework for Volume II which deals with more specific and operational issues related to spatial policies and settlement design.
