The NHS Injectable Medicines Guide (IMG) is used by nurses in >100 hospitals to guide the preparation & administration of IV medicines. Surveys suggest users find it too detailed & confusing¹. This may make it difficult to find relevant, unambiguous information & could lead to serious medication errors. We aimed to identify & resolve problems in two typical IMG guides via user testing².

The Medicines Practice Committee will provide oversight and guidance on policy and practice relating to the use of injectable medicines within the Trust and co- ordinate the actions required to improve practice as identified through medication incident reports, risk assessments and audit.

Injectable Medicines Policy V4.1 July 2020

Approved by:- Medicines Governance Group, June 2020 Review date: June 2022 If administered via a central venous access device, lower infusion volumes may be used. See the National Injectable Medicines Guide for details. Click here to access Monitoring requirements -Renal function daily

"I would definitely recommend this book to all staff with an interest and involvement in intravenous drug therapy." □The Pharmaceutical Journal "There is no doubt that nurses will find this small book useful. It should be available for consultation in any clinical area where drugs are administered to patients by the injectable routes." □Journal of Clinical Nursing The safe administration of injectable medicines is key to patient safety. The NPSA recognises the use of injectable medicines is a high risk activity and recommends written information about injectables to be available at the point of preparation. The UCL Hospitals Injectable Medicines Administration Guide is a practical, accessible guide covering many important aspects of administering medicines by injection. It provides clear, concise information on the preparation and administration of over 245 injectable medicines for adults, paediatrics and neonates. It is an essential resource for nurses and other healthcare professionals: it provides the key information and advice needed for the safe and effective administration of injectable medicines. The Guide's introductory section provides a concise yet comprehensive overview of injectable therapy, including the risks and benefits of IV administration, infusion devices, and pharmaceutical aspects of injectable therapy. For each drug the alphabetically tabulated monographs provide: A practical method of preparation and administration via the IV, IM and SC routes, with risk reduction in mind at every step Expert advice from the team of specialist pharmacists at UCLH to ensure safe and pragmatic use of each medicine Monitoring advice for the management of reactions that may occur during administration Y-site and syringe driver compatibility data Minimum infusion volume data for fluid restricted patients Extravasation warnings, pH, sodium content, displacement values, stability and flush data New to this edition: 40 new monographs including recently marketed, unlicensed, rarely used and specialist medicines Detailed advice for the administration of high risk medicines such as

heparin, with access to UCLH's medicine related guidelines at www.wiley.com/go/UCLH A colour-coded NPSA risk assessment for every mode of administration for every medicine, to highlight the safest method of administration A user guide and tutorial to give new readers confidence in using and understanding the Guide Revised chapters on administration methods and devices, aseptic non-touch technique, and latex allergy Fully revised and expanded Y-site compatibility section Spiral binding to allow the book to be left open at the relevant page The Guide is also available electronically at www.uclhguide.com.

With over 400 drug monographs, this book covers the technical, practical and legal aspects that you should consider before prescribing or administering drugs via enteral feeding tubes.

Standards for unlicensed aseptic preparation in the UK, as well as practical information for implementing the standards.

The Palliative Care Formulary is established as the comprehensive compendium of essential therapeutic information for palliative care specialists, pharmacists and oncologists. This expanded new edition incorporates numerous important updates and new data, bringing together a wealth of important information about drugs commonly used in palliative care and about drugs for use in special circumstances by, or in conjunction with, a specialist in palliative care. It highlights drugs given for unlicensed indications or by unlicensed routes and deals comprehensively with the administration of multipl.

The guidelines and skills required to become a nurse are always changing and it can be difficult to stay up-to-date with the current standards. This book has been specifically designed to address the main skills you need to meet NMC requirements. *Becoming a Nurse* will demystify what you need to know while preparing you to meet NMC standards and become a confident, practicing professional. This book is ideal for both pre-registration and practicing nurses. It is an excellent resource to prepare you for your programme or to refresh your knowledge of current NMC standards. User-friendly language describes the key NMC standards to *Become a Nurse*: · Personal and professional development · Professional and ethical practice · Care delivery · Care management · 17 overarching standards of the NMC. "More readable than texts on single topics such as ethics or management, it is also a better preparation for the accountability of Registration than clinically oriented books usually are. ... Would you recommend it? Resoundingly, yes."- Sue McBean, University of Ulster, THES, Feb 2010

This book provides research and commentary on pharmacy technicians. It demonstrates how the re-design of pharmacy workflow to incorporate more responsibilities for technicians will free up pharmacist time to provide direct patient care. It also highlights that doing so can be accomplished without compromising—and often even improving upon—patient safety. The book also sheds light on employer needs and on new paradigms in pharmacy technician certification, education, and training. However, it also demonstrates the need for improvements in this area, as well as improvements in pharmacy technician quality of work life, advancement opportunities, and wages. Taken together, the papers in this book demonstrate how the results of recent studies help pave the road for the continued evolution of pharmacy care and the optimal deployment of pharmacy workforce personnel.

This is the third edition of this publication which contains the latest information on vaccines and vaccination procedures for all the vaccine preventable infectious diseases that may occur in the UK or in travellers going outside of the UK, particularly those immunisations that comprise the routine immunisation programme for all children from birth to adolescence. It is divided into two sections: the first section covers principles, practices and procedures, including issues of consent, contraindications, storage, distribution and disposal of vaccines, surveillance and monitoring, and the Vaccine Damage

Payment Scheme; the second section covers the range of different diseases and vaccines.

"The book is an easy to follow introductory text ... It uses uncomplicated language and case studies and questions that provide students with concrete examples, relating to real life situations, upon which they can develop their pharmacological knowledge and understanding. Clinical tips are clear and illustrate the key points that should be considered by the nurse in the real care giving environment, including acknowledgement of the increasing usage of complementary medicine." David Armstrong, Senior Lecturer, Northumbria University, UK "This new book explains specific common disease processes including anatomy and physiology as well as the medications/drugs which may be used It will be essential reading for pre-registration nursing students who want to build on their existing knowledge." Margaret Dilger, Lecturer, University of Salford, UK This user-friendly guide follows on from the bestselling book *Essentials of Pharmacology for Nurses*, and is written for pre-registration nursing students looking for an accessible guide to drug groups that goes beyond the essentials. It is simple and accessible and examines the next logical set of drug groups that nurses need to know. These include: Cardiovascular drugs Gastrointestinal drugs Drugs used in cancer Drugs used in nausea and vomiting Anaesthesia Fluids Topical medicines Written by authors with extensive academic and practice experience, this book will build on your existing knowledge of anatomy and physiology to help give a holistic understanding of body systems. It features: Multiple choice questions in every chapter and calculation tests Unique sections on "Complementary Therapies and Pharmacology" and "Medicines Used on the Skin" Clinical tip boxes linking pharmacology to the role of the nurse or midwife Patient scenarios from a range of different clinical settings

Liver disease is a widespread and increasing problem throughout the world, however little is published on how different types and degrees of liver dysfunction affect the body's ability to handle medicines. "Drugs and the Liver" is designed to assist practitioners in making pragmatic choices for their patients. It aims to: enable the practitioner to assess liver function using biochemical markers, other tests, signs, symptoms and disease knowledge; identify which pharmacokinetic and pharmacodynamic parameters of a drug are likely to be affected by different types of liver disease; and consider the impact of a drug's side effects on a patient with liver disease. This practical guide covers background information on liver function, the principles of drug use in liver disease and includes a section of worked examples of commonly asked questions. It will be invaluable to clinical pharmacists and anyone making medicine choices in patients with liver impairment.

This is thirty-fifth edition of *Martindale*, which provides reliable, and evaluated information on drugs and medicines used throughout the world. It contains encyclopaedic facts about drugs and medicines, with: 5,500 drug monographs; 128,000 preparations; 40,700 reference citations; 10,900 manufacturers. There are synopses of disease treatments which enables identification of medicines, the local equivalent and the manufacturer. It also Includes herbals, diagnostic agents, radiopharmaceuticals, pharmaceutical excipients, toxins, and poisons as well as drugs and medicines. Based on published information and extensively referenced
