Raising concerns about pharmacy education and training ...

Pharmacy At the University of Bradford we've been teaching pharmacy since 1927, and are experts in preparing students for the world of clinical practice.

This book presents a contemporary view of pharmacy practice research covering theories, methodologies, models and techniques that are applicable. It has thirteen chapters covering the range of quantitative, qualitative, action research and mixed methods as well as management theories underpinning change in pharmacy practice. “Pharmacy Practice Research Methods” examines the evidence and impact as well as explores the future. Pharmacy practice is rapidly transforming and as such it is to be adaptable as student and academic researchers and to not only understand techniques and methodologies, but as champions to nurture the field. There is a literature in this area but few integrated texts which cover the wide range of pharmacy practice including methodologies, evidence, practice and policy. This book provides a solid foundation for exploring these phenomenon further, and is expected to serve as a valuable resource for academics, students, policy makers and professional organisations.

Women with chronic medical problems are at higher risk for complications during pregnancy and therefore, they are especially in need of appropriate preconception and contraception care. Furthermore, many women with chronic medical problems do not obtain adequate preconception and contraception care. Despite published guidelines by the Centers for Disease Control and Prevention, there is a substantial gap in medical practice regarding the use of contraception in women with co-existing medical problems. Contraception for the Medically Challenging Patient fills the gap that currently exists in the knowledge of correct contraceptive prescribing practice and shows that inappropriate contraindications can easily become a barrier to effective contraception use among women. Chapters highlight obsolete views about appropriate candidates for contraception and address the complex contraceptive needs of today's medically challenging patients with HIV/AIDS, uterine fibroids or cardiac, neurologic or thyroid disease. The book gives attention to recommendations on the use of contraception in women with medical problems such as diabetes, obesity, epilepsy, and lupus, among others and provides comprehensive information regarding the effects that certain drugs may have on contraceptive hormone levels. While national guidelines do exist for contraceptive eligibility, this book discusses in more detail the evidence behind the guideline recommendations and the nuances that clinicians confront in daily practice.

31 Inspiring Stories and Lessons Learned from Women in Pharmacy Letters from Women in Pharmacy: Stories on Integrating Life and Career focuses on the unique challenges and opportunities faced by women in pharmacy. This collection of 31 personal letters represents experiences of women from a wide array of backgrounds and career paths. Each letter is filled with practical advice, insights, and compelling stories on developing strong support systems and maintaining healthy perspectives on the many roles that women balance to inspire generations of future pharmacy leaders. Edited by Sara J. White, MS, FASHP; Susan Teil Boyer, MS, FASHP; and Hannah K. Vanderpool, PharmD, MA; Letters from Women in Pharmacy is the latest addition to ASHP’s Letters series, a growing collection of personal letters created to inspire pharmacists through all stages of their professional journey. Like having a mentor always at your side, Letters from Women in Pharmacy is a resource you can dip into any time for inspiration, reassurance, and down-to-earth advice from those who have navigated similar career journeys.

The problem of opioid addiction is growing in Ontario, primarily associated with the use of pharmaceutical products rather than heroin. For many Ontarians struggling with opioid dependence, methadone maintenance is an effective treatment that could save their lives. However, methadone has a unique pharmacological profile that requires specialized knowledge and procedures to ensure its safe use. Pharmacists are at the front line of ensuring clients' safe and effective use of methadone. This guide complements CAMH's comprehensive best-practice manual for pharmacists, Methadone Maintenance: A Pharmacist's Guide to Treatment, a required resource for all pharmacies dispensing methadone in Ontario. This new book addresses issues beyond best practice by the individual pharmacist, making a series of recommendations related to interprofessional collaboration, the pharmacy environment, education programs, accessibility of services and research needs. As the most accessible member of the treatment team, pharmacists are uniquely positioned to make a difference in the care of MMT clients. This book envisions ways in which professional organizations, educators, policy makers and researchers, among others, may support individual pharmacists working in a variety of practice settings in enhancing the care they provide through MMT pharmacy services.

"This book provides pharmacists with an overview of pharmacological therapies for opioid use disorders and information about related issues pertaining to pharmacy practice. Its main focus is to provide information on evidence-based treatment of opioid dependence using opioid agonists--methadone and buprenorphine--while acknowledging the importance of behavioural interventions such as psychosocial counselling."--

Health care systems worldwide are faced with the challenge of improving the quality of care. Providing evidence from health research is necessary but not sufficient for the provision of optimal care and so knowledge translation (KT), the scientific study of methods for closing the knowledge-to-action gap and of the barriers and facilitators inherent in the process, is gaining significance. Knowledge Translation in Health Care explains how to use research findings to improve health care in real life, everyday situations. The authors define and describe knowledge translation, and outline strategies for successful knowledge translation in practice and policy making. The book is full of examples of how knowledge translation models work in closing the gap between evidence and action. Written by a team of authors closely involved in the development of knowledge translation this unique book aims to extend understanding and implementation worldwide. It is an introductory guide to an emerging hot topic in evidence-based care and essential for health policy makers, researchers, managers, clinicians and trainees.
