Practical Transfusion Medicine, 5th ed. The transfusion of blood and blood components is used as a tool to correct anemia and/or hypovolemia during major hemorrhage. It carries the risk of potentially lethal adverse events such as acute hemolysis, immunological reactions, infectious disease transmission, electrolyte disequilibrium, and hypothermia, making it a major medical intervention.

Since this time, advances in human transfusion medicine have led to advances in veterinary transfusion medicine. One benefit of this technology has been in blood component therapy. Separation of a unit of whole blood into components was made possible by the development of plastic bags for blood collection and high speed refrigerated centrifuges.

This title is a fundamental guide to routinely performed laboratory procedure in a transfusion service for dogs and cats. The goal of this title is to provide easily accessible, clinical information regarding the collection, storage, and use of blood and blood products in the small animal patient. It includes step-by-step procedures for the separation of whole blood into blood components along with a "how to" for establishing a community based Blood Bank for dogs and cats. This essential guide provides a clear presentation of the immunologic and genetic principles of direct interest to the practitioners and laboratorian who handle blood and blood products for the treatment of selected cancers and bleeding disorders in small animals. A practical section is included in the book that discusses the guidelines for Biosafety and Quality Assurance for a transfusion service. The presentation follows the concise and highly visual format of our Made Easy Series and is an excellent resource for in-service training of office personnel at any level. Published by Teton New Media in the USA and distributed by Manson Publishing outside of North America.

Jeffrey McCullough offers a concise,

clinically focused and practical approach to this important area of medicine. This book offers complete guidance on the full range of topics from donor recruitment, blood collection and storage, to testing and transfusing blood components, complications and transmissible diseases, as well as cellular engineering, therapeutic apheresis, and the role of hematopoietic growth factors. It is a good introduction to transfusion for hematology or oncology fellows and technologists specialising in blood banking.

Transfusion Medicine, Apheresis, and Hemostasis: Review Questions and Case Studies is the collaborative effort that spanned a time period of 2 years and included 50 experts, many whom are national leaders in their respected fields. It also represents the passion and privilege we feel to teach the next generation of physicians in Transfusion Medicine and Apheresis. The main goal for this book is to help the readers build a solid foundation of both basic and advanced conceptual knowledge to prepare for the American Board of Pathology (ABP) certification exam in Transfusion Medicine. This book is not intended to be a substitute for textbooks, original research or review articles, and/or clinical training. Further, since the field of medicine, both from a scientific and regulatory perspective, rapidly changes, the readers are advised to continuously update their knowledge by

Online Library Practical To Transfusion Medicine

attending national meetings and reading clinical journals. To equip the readers with the basic knowledge in critical reading and data analysis, which is an essential skill in daily medical practice, a novel chapter titled "Data Interpretation in Laboratory Medicine" was included in this book. In this chapter, the readers are asked to make logical conclusions based on the given data and/or statistical results. Moreover, there is also a chapter on "Practical Calculations in Transfusion Medicine, Apheresis, and Hemostasis" to help consolidate all the necessary formulas commonly used in daily practice for easy reference. These chapters are unique to our book and will not be found in any other currently on the market. All of the questions in this book were originally created by the authors of each chapter. Each question can either be standalone or part of a case scenario representing challenge cases in Transfusion Medicine, Apheresis, and Hemostasis. These questions often represent both rare and common clinical scenarios that the authors have seen during their clinical practice. Each question is then followed by 5 possible answers, with only one being correct (or the best answer). After the question, there is a conceptual explanation followed by a more factual explanation of the right and wrong answers. We gave the individual authors the freedom to choose how they explained the wrong answer choices. Some authors chose to be more direct (e.g. Answer A is incorrect

Online Library Practical To Transfusion Medicine

because...), while other authors chose a more conversational style (e.g. Human resources (answer A) includes staffing, selection, orientation, training, and competency assessment of employees). This format is designed to help the student linking the conceptual and factual knowledge together to form a solid foundation for use in clinical practice. At the end of each chapter, there is a list of articles and textbooks that will prove useful to the motivated student who wishes to become an expert in the field. Another special feature to our textbook is the presence of a pre-test and post-test, which are provided to help the readers with self-assessment. As stated above, the main focus of this book is to help the readers preparing for the ABP certification exam in Transfusion Medicine. However, due to the interdisciplinary nature of the field of Transfusion Medicine, Apheresis, and Hemostasis, we believe that this book is also beneficial to and can be used by all clinicians involved in the management of complex transfusion, apheresis, and hemostasis issues, such as hematologists, anesthesiologists, surgeons, and critical care physicians. We further believe that it is a helpful guide for these specialists to prepare for their own specialty certification exam, when the topics are related to Transfusion Medicine, Apheresis, and Hemostasis.
