How do we define thinking? Is it simply memory, perception and motor activity or perhaps something more complex such as reasoning and decision making? This book argues that thinking is an intricate mix of all these things and a very specific coordination of cognitive resources. Divided into three key sections, there are chapters on the organization of human thought, general reasoning and thinking and behavioural outcomes of thinking.

philosophy, and neuroscience, this book explores thinking, reasoning and decision making in autism. The new cognitive approaches challenge some of the existing assumptions of the nature of thought in autism, including presumed areas of impairments. Instead, this book focuses on the nuanced array of cognitive signatures that characterize the autistic mind, and in many cases it reveals the possibility of intact performance alongside instances of remarkably enhanced thinking. The book considers the implications of these characteristics, providing in-depth analyses
