What is a Section 2 of the Mental Health Act?

Section 2 of the 1989 Act in the spotlight. It is perhaps unsurprising in the current economic climate that there have been numerous cases before the Courts concerning the interpretation of contracts relating to land. As parties seek to interpret the contractual terms to their commercial advantage, the legal principles that apply to contracts for the sale or other disposition of interests in land have become the focus of judicial debate and commentary.

Local planning authorities can grant permission in principle to a site upon receipt of a valid application or by entering a site in Part 2 of its brownfield land register which will trigger a grant...

Mathematical modeling is becoming increasingly versatile and multi-disciplinary. This text demonstrates the broadness of this field as the authors consider the principles of model construction and use common approaches to build models from a range of subject areas. The book reflects the interests and experiences of the authors, but it explores mathematical modeling across a wide range of applications, from mechanics to social science. A general approach is adopted, where ideas and examples are favored over rigorous mathematical procedures. This insightful book will be of interest to specialists, teachers, and students across a wide range of disciplines..

Educators know it's important to get students to engage in "higher-order thinking." But what does higher-order thinking actually look like? And how can K-12 classroom teachers assess it across the disciplines? Author, consultant, and former classroom teacher Susan M. Brookhart answers these questions and more in this straightforward, practical guide to assessment that can help teachers determine if students are actually displaying the kind of complex thinking that current content standards emphasize. Brookhart begins by laying out principles for assessment in general and for assessment of higher-order thinking in particular. She then defines and describes aspects of higher-order thinking according to the categories established in leading taxonomies, giving specific guidance on how to assess students in the following areas: * Analysis, evaluation, and creation * Logic and reasoning * Judgment * Problem solving * Creativity and creative thinking Examples drawn from the National Assessment of Educational Progress and from actual classroom teachers include multiple-choice items, constructed-response (essay) items, and performance assessment tasks. Readers will learn how to use formative assessment to improve student work and then use summative assessment for grading or scoring. Aimed at elementary, middle, and high school teachers in all subject areas, How to Assess Higher-Order Thinking Skills in Your Classroom provides essential background, sound advice, and thoughtful insight into an area of increasing importance for the success of students in the classroom—and in life.

companies to diversify may outweigh the costs of doing so, and that some traditional regulatory concerns may be excessively restrictive. The papers by Hillman, Harris, and Jang and Norsworthy, while all relating to individual industries, have lessons for other regulated industries. Hillman's paper, "Oil Pipeline Rates: A Case for Yardstick Regulation," deals with the important topic of yardstick regulation for oil pipelines. While his application is highly specific, the potential application of yardstick regulation goes beyond oil pipelines. He reviews the evolution in the law regulating oil pipelines. While showing that some progress has been made in introducing economic efficiency considerations into regulation, he provides a careful critique of the operation of existing regulation and suggests an alternative based upon a yardstick approach. His approach seeks to use competitive market prices as the yardstick, with administration of price discrimination limited to dealing with possible "favoritism" to subsidiaries and affiliates. "Telecommunications Services as a Strategic Industry: Implications for United States Public Policy" by Harris and "Productivity Growth and Technical Change in the United States Telecommunications Equipment Manufacturing Industries" by Jang and Norsworthy provide important insights for telecommunications.
